THE MONEY MARKET.

NOTHING has occurred during the past week to break the calm of the money market. The Bank has continued to be drawn upon for holiday and harvest requirements, but that, of course, is an ordinary movement, which, unless when the reserve is very low—which is certainly not the case at present—calls for no attention. And so amply is the market supplied with credits, that the payment of the instalment on the recent issue of Consols due on Thursday led to only a very moderate amount of borrowing at the Bank. And seeing that the money paid in to the credit of the Government will soon be disbursed again, and that the Bank is likely to have its position strengthened by the receipt of the gold now on its way from India the immediate outlook is for a continuance, if not an increase in the present ease. But the possibility of gold having to be shipped from this side to the United States later on has to be kept in view.

THE EMPRESS FREDERICK.

In the Empress Frederick Europe has lost a very remarkable woman. She alone among her mother's children inherited to the full that faculty of statesmanship which gave Queen Victoria her exceptional place among sovereigns. In equally favourable circumstances she might have played an equally prominent part, whereas as it happened she seemed reserved to show how dependent even a great personality is on the conditions amid which it lives and works. Had she been an Empress regnant she would have left her mark upon German politics. Had she been even an Empress-Consort she would have borne her full share in the conception of her husband's designs. As Empress-Dowager she kept apart from politics, and regained much of the popularity which her persistence in an unequal contest had estranged. Her real life was over before she came to the throne. As Crown Princess she had sought to be a power in German affairs, and but for the evil fortune which gave her Bismarck for an antagonist she would doubtless have succeeded. She would have been the pioneer of Liberal ideas in her husband's country, and in the Crown Prince she had a fellow-worker who shared her political convictions. Had the Emperor William stood alone, or had his Minister been a statesman of ordinary resolution and courage, the Crown Princess would have had her way. She was personally a favourite with her father-in-law, and as the wife of an heir so admirable in every way as the Crown Prince, and so united with her in thought and wish, her influence would naturally have been supreme. But the combination which she had to face was too mighty for her. Without his Minister the Emperor William would have been a kindly, somewhat commonplace Sovereign. Without his master Bismarck might have fretted his heart out, as he did under his master's successor. But the two fitted into one with extraordinary completeness. The faculty of recognising good service is the greatest gift perhaps that a Sovereign can have, and William I. possessed it in no common measure. He was not troubled with any special ideal of Prussian greatness. It was enough for him that Prussia should attain greatness somehow, and when Bismarck's theory of how this end might be attained was unfolded to him he had the instinct and the resolution to make it his own. For his son and his daughter-in-law the picture that impressed the imagination of William I. had no charms. They disliked the ideal offered to them and they distrusted the possibility of reducing it to fact.

They might reasonably have looked forward to seeing their scepticism justified by the event. In the case of the Crown Prince, whose dispositions were all in the direction of that Liberal progress which forty years ago seemed to have the political tide with it, and of the Crown Princess, who had brought from England the traditions and associations of Constitutional kingship—those traditions and associations which her father had done so much to foster and her mother to exhibit in action—the conviction that Bismarck's policy must fail was probably strengthened by the wish that it might. And as we look back to that period we are still tempted to wonder that it did not fail. When Bismarck began his famous struggle with the Prussian Parliament most Englishmen probably were of opinion that it was only another instance of a strong and obstinate man contending against the inevitable and irresistible drift of public affairs. It was only natural that the Crown Prince and Princess should make this view their own, because they might well think themselves to have the power of giving that drift additional force. But as it turned out, Bismarck's reading of the situation was more accurate than theirs. He knew himself, he knew his master, he knew the Germany with which, if his master only lived, they two would have to deal. He foresaw the great destiny which was in store for Prussia. He foresaw that she could only make that destiny her own by the creation of an army strong enough to intervene in the affairs first of Germany, and then of Europe, with decisive effect. But the creation of such an army was impossible if the Prussian Parliament and the Prussian Liberals, whose ideas dominated the Parliament, were allowed to have their way. Consequently, Bismarck was determined that they should not have their way. He saw in the King the precise instrument he wanted, the only instrument that could possibly have enabled him to carry out his object; and, strong in the possession of that instrument, he set at defiance those Liberal and Constitutional theories which were so dear to the Crown Prince and Princess. And by setting them at nought he gained the day. All his forecasts were verified, all the promises made to the King were fulfilled. Prussia grew into the North German Confederation; the North German Confederation grew into the German Empire. It must have been a bitter day for the Empress Frederick when she saw the utmost greatness that she could even have dreamed of for her husband and her son realised to the full, but realised by methods which she disapproved and detested, and by a man whom she would have thwarted had she been able.

Nor was she allowed to take in peace the course dictated by regard alike for her dignity and her happiness. It was her misfortune to have to do with an adversary who never turned aside from his purpose and hesitated at nothing which he thought likely to further that purpose. He found the ground already prepared. England was not popular at the Prussian Court, and a clever young woman, imbued with the ideas of English Liberalism, was not likely to make it more so. When it suited the Minister to begin a policy of veiled accusations it was willingly taken up, and from that time onward every act and word of the Princess's was misconceived by some and distorted by others. From Bismarck's point of view, indeed, distortion was hardly necessary. The Crown Prince and Princess disapproved of his policy in Schleswig-Holstein, of his treatment of Austria and of the Hanoverian Royal Family, of the bombardment of Paris, and though, as one question after another was settled in accordance with Bismarck's wishes, the Princess ceased to be an active antagonist to his policy, she continued, in Bismarck's eyes, to be a danger in reserve. It was to guard against this, possibly, that he took so much pains to indoctrinate the present Emperor with his own views. An Heir Apparent is commonly disposed to take a different view of public affairs from that taken by his parents, and in this case a young man might be pardoned if he showed himself unable to resist the influence of Bismarck's character and the magnitude of his achievements. So, at all events, it fell out. William II. was for a time the docile pupil of Bismarck, and in that character it was not possible for him to avoid a coolness between him and his mother. Happily for the Empress Frederick the estrangement did not long survive the death of her husband. The great Chancellor was suddenly dismissed from office, for reasons which have never been fully made known, and the relations between the Emperor and his mother benefited by the change.

The conflict with Bismarck was the political work of the Empress Frederick's life. With his disappearance from the political stage she too passed into a period of retirement from which she was not again to emerge. She leaves behind her a memory dear to Englishmen, and dear also to all of whatsoever nation who measure policies by other standards than that of immediate success.

BLACK LABOUR IN SOUTH AFRICA.

The colonial debate of Tuesday night was remarkable as the first of a series which will probably last for many years, and produce as great bitterness of feeling as even the South African War. It was really a debate, though complicated with some other questions, as to the mode in which the black inhabitants of South Africa shall be induced to work. There are three opinions—not two—upon that subject, and, unless it is treated from the first as most important, and managed with great decision, as well as delicacy, those opinions will come into collision, and create serious political difficulties, if not armed insurrections. As the war dies down—and, long as it lingers, it is dying down—this question comes to the front as the dominant factor which must govern all organisation, all legislation, and, as we hope shortly to show, a great deal of taxation in South Africa. It is absolutely necessary, therefore, for all politicians to make up their minds upon it, and, if possible, to accept some system which they are, at all events, resolved to try experimentally.

As we have said, there are three opinions as to the treatment of the blacks in South Africa, and not two. It is usually believed that the only dispute is between the advocates and the opponents of slavery, but that is not the case. The first opinion is that of the Boers, which is that the blacks were intended to work for the white man, that they are not entitled to wages for their work except as matter of grace, and that if they resist they should be whipped and shot until they obey. That is slavery. No one can read the history of South Africa without perceiving that this is the opinion of the Boers, that they have consistently acted upon it, that they act upon it now, and that a belief that the British will favour the natives is the strongest of the three causes which disincline them to accept our rule. The first is slavery; the second, pride of race; and the third, local or provincial patriotism, such as once divided Brittany from France, and now divides South Ireland from the United Kingdom. The second opinion is that of the British in South Africa, which differs radically from that of the Boers, but is still not precisely that which is current among the majority at home. It is briefly this: that the natives have rights, especially to wages and just treatment, but that they are not at liberty to be idle, to break contracts at their own discretion, as, for instance, by strikes, or to demand wages which cannot be paid with due regard to the profits of the industry, and so cause themselves to be left in idleness. The British colonists, therefore, practically demand that every native should work, that Government or other fairly impartial authority should fix a maximum of wages, and that if these two rules are resisted, the native should be punished—as moderately as may be, but still punished—until they are obeyed. This opinion, as we understand his speech of Tuesday, is held by Mr Chamberlain, not, indeed, as the best, or even the right one in the abstract, but as the only one which can be made a basis of action until the economic situation greatly improves. The third opinion is that of the average Englishman at home, which is that the native ought to work, but that he ought not to be made to do it by direct punishment for not working, and that while he is not entitled by reason of his low civilisation to any kind of political power, he is entitled, if willing to work, to sell his labour at his own valuation, and to retreat to his hut if that valuation is not accepted. This is, of course, real freedom as it exists in India or among English women. It is perfectly certain that if some compromise cannot be found these three opinions will collide, and we are by no means satisfied that, should they collide, the British and Dutch settlers will be found in opposite camps. It is far more probable that they will unite, and that the British Government and people will have to deal with an opposition which, being partly based on moral and partly on economic grounds, will be peculiarly bitter, and which in all countries has tempted disputants to resort to force. Labour disputes rouse strong passions even in Europe, and when, as in South Africa, the disputants are of different colours, and the pride of caste is involved as well as the pride of the employer, the quarrel becomes dangerous even to the maintenance of external order.

We believe that a compromise is possible if extreme views are laid aside. The Boer theory in the first place cannot be applied. Whether slavery can be justified or not as a method of habituating the dark races to assiduous labour, the British people will not tolerate it, whatever the consequences may be, and it must be given up. Nor will they tolerate as between the colours the doctrine of equality, which they believe to be both unfounded and inexpedient. They will not consent in South Africa any more than in India that the white power which they believe to be essential to good and progressive government shall be overwhelmed by a multitude of dark voters. They insist on a compromise between those two lines of thought, and desire that the black man shall be induced to work, as the white man is induced to work—by compulsions which, though nearly irresistible, shall still leave him as free as, for example, the white woman is. They think this may be secured, and only hesitate as to the method from a doubt whether the black man is not so incurably idle that some mode must be discovered not used in Europe of overcoming his idleness. As we believe, that method is a simple one, for the doubt suggested is at once true and false. It is true that the black native like the white native of Southern Europe, enjoys his idleness whenever it is convenient to be idle, and does not feel in his own *ennui* any compulsion to labour. But it is not true that he will not work when work is less disagreeable in its consequences than idleness is. He does work, although he is free all over the Southern States of the Union. He does work in the West India Islands, though there is no compulsion on him other than the compulsion which exists in Europe. And he does work, as we can testify on evidence before us, with singular heartiness and energy in Nigeria, where he is not only free, but can, by retreating into the bush, place himself in twelve hours beyond the pressure even of white opinion. All that he requires is inducement, and, clearly, the right inducement is a good wage, to be partly settled by himself and partly by his employer, and a taxation which he cannot wholly escape. We do not understand Sir William Harcourt's objection to this last inducement. There is no more reason why a black man should have the benefit of laws and magistrates which protect his person and his property without payment, than why the white man should. With these two inducements and ordinary fairness we believe there will be no difficulty in South Africa in obtaining labour, though it will for a time be shiftless labour, labour taking little thought of time, and in many ways irritating to men of more energetic temper and greater desire to secure rapid profit.

There is, however, one partial exception to this solution upon which it is necessary to say a word. Many experienced men believe that the mines cannot be worked without compulsory labour, because black men, being governed by superstitions about bogeys, spooks, and the like, will not, if free, work underground. We do not quite believe them, because we see that the black men do work, and think a necessity to earn wages as compelling an inducement as the lash, but if they are right the remedy is clear. The mine owners must import labour to meet their special want, as labour is imported in the Mauritius, in Ceylon, in Guiana, and even in the West India Islands under proper guarantees and careful guardianship. It may be that with imported labour inferior mines cannot be worked; but then, that is the fate of inferior mines all the world over, in Cornwall no less than in the Transvaal. We do not believe that anywhere in the world, with the present means of communication, mines which will really pay will fail for want of labour, or that slave labour can ever in the long run be a profitable employment of force. At all events, as British opinion is now fixed, some expedient must be tried which is not that, for that will not be allowed.

AUSTRALIAN AFFAIRS.

(FROM OUR OWN CORRESPONDENT.)

MELBOURNE, June 28, 1901.

AT this season of the year, nearly always quiet in every respect, little can be written with regard to prospects generally. The year is not advanced enough to predicate with any degree of certainty the results of the next pastoral and agricultural season. With regard to the former, squatting finance, so far as it is connected with stations in districts liable to drought, is perhaps in a worse way than ever, and it would almost be an advantage if more than one company could be placed in liquidation. Several companies, possessed of no commission business to speak of, might disappear without the Australian pastoral industry suffering in the slightest. In Queensland, cattle stations are more highly valued than sheep stations, the freezing and extract works placing a premium upon the former. With respect to wool, it is now being recognised that the falling off in production is not of great consequence, the markets being lower than in times of normal production. Hence there is no desire to extend pastoral occupation, but rather to curtail it. Good sound stations are, however, easy to dispose of at fair prices. The Australian money market is rather firmer, as a result of the rather free local borrowing on public account to which reference has previously been made. British capital is still being withdrawn, and a certain amount of Australian capital is still going to London for investment. The conduct of mercantile affairs is embarrassed by the grave uncertainties existing with respect to the Commonwealth uniform tariff that is to be.

Industrial interests are seriously affected by the enhancement of the cost of manufacture resulting from the adoption of the principle of a minimum wage in many trades, and from the declared policy of the Victorian and New South Wales Governments to give 7s per day for unskilled labour, whether competent or incompetent. The application of the "minimum wage" has thrown a large number of slow and incompetent workers out of employment, and the attraction of the gospel of 7s per day has caused an equally large number of labourers to throw up employment, and to join the ranks of the "unemployed." Results are that in both Melbourne and Sydney there are thousands of unemployed labourers and tradesmen who, under natural conditions, might easily find employment. The distress thus manufactured is very great, but there are not wanting signs of a revulsion of feeling and a return to common sense. The 7s per day doctrine, it may further be noted, is the cause, direct or indirect, of about a couple of thousand men being either on strike or locked out in Sydney. It is a great pity that the Australian States have, for a time at least, become the happy hunting-ground of quacks who prescribe ineffectual nostrums for evils that have their existence mostly in the imagination. The so-called advanced legislation of Australia on social and industrial matters is, when impartially weighed, only arrant humbug.

AUSTRALIAN PUBLIC FINANCE.

The financial year (July 1, 1900 to June 30, 1901), of four of the Australian States is closing, and some idea of the position as regards ordinary revenue and expenditure can now be formed. In Queensland it is officially recognised that the deficit will be about £550,000. This unfortunate reversal of the experience of several years past, during which surpluses have been shown, is certainly largely due to the drought that has afflicted the colony. But it is also due in part to the straining of the revenue by a rapidly increasing expenditure. From 1894-5 to 1899-1900, expenditure increased by £1,231,984, of which £516,247 occurred in 1899-1900. Revenue expanded during the five years by £1,175,034, but under the peculiar circumstances of Queensland, exposed as it is to sudden reverses, the expenditure should have been kept within more moderate bounds. The total amount of the surpluses for the six years ended June 30, 1900, was only £395,689 (succeeding a period of five years, when the deficits amounted to £1,090,120), and a new period of deficits commences with one for the years 1900-1 of about £550,000. It was clear ten months ago when the Colonial Treasurer made his annual statement that the revenue would be affected by the drought. Yet his estimates of expenditure amounted to £4,571,968, being £31,550 in excess of the actual expenditure for the previous year. Too much allowance was made for the recuperative power of the State. The preparation of the next Budget will be a matter of considerable difficulty, especially as there will be contribution to Commonwealth expenses to provide for. The disturbance occasioned by the Commonwealth tariff, whenever it becomes law, will also embarrass the Treasurer of Queensland as well as other Treasurers.

The position in Victoria, while much better than that in Queensland, is hardly satisfactory. The revenue for 1900-1 was estimated at £7,482,350, against £7,448,408 actually received in 1899-1900, and expenditure at £7,481,260, against £7,280,689. Owing chiefly to the large increase of the railway income, and to the large payments of duty in anticipation of the Commonwealth tariff, the estimated revenue is likely to be exceeded by £400,000, more or less. But to provide for additional expenditure, supplementary estimates, amounting to £486,035, were passed on the 26th inst. The discussion was brief, and the Bill was passed through all its stages at one sitting. Should the ordinary estimates be substantiated, as no doubt they will, the expenditure for the year will amount to about £7,967,000, the increase on the previous year being no less than £687,000. Of this increase, the additional cost of the railway service accounts for close upon £200,000. The expenditure in connection with the Commonwealth celebrations amounts to about £80,000, and old-age pensions have (for a part only of the half-year) absorbed £135,000. During the four years ending 1900-1, the revenue has increased by about £1,200,000, and the expenditure by £1,400,000. (These figures are partly estimated so far as the year just closing is concerned.) A considerable proportion of the increase in expenditure can be satisfactorily accounted for, but it is nevertheless the fact that, as the revenue increased, the hold kept on expenditure was relaxed. The heavy taxation might have been reduced with a portion of the increased revenue. For the coming financial year the outlook is hardly promising. The old-age pensions will cost some £200,000 more, a full year having to be provided for; increased grants to local bodies are proposed, and a share of the Commonwealth expenditure has to be borne, while, on the other hand, it is hardly likely that the share of Customs and Excise revenue to be obtained by Victoria under the Commonwealth tariff will be as large as the amount hitherto received direct.

The New South Wales position is a serious one. The revenue has increased greatly, by £500,000 to £600,000, but the expenditure will show a larger increase, and it is expected that the year will close with a deficit. The *insouciance* that as a rule characterises a New South Wales Ministry with respect to monetary affairs is very manifest. The money has been spent, and there's an end of the matter. The Lyne Government and its successor have evidently laid themselves open to the charge of recklessness in expenditure. But then it is to be remembered they had to keep themselves in office, and lavishness is a considerable aid in accomplishing that object. The partial creation of an army of "unemployed," by attracting them from employment by the assertion of the rule that Government would give them work at 7s per day, is responsible for a portion of the increased expenditure. As to the coming financial year, the Ministry expects to receive a windfall. New South Wales is at present lightly taxed through the Customs, but no Commonwealth uniform tariff will be effective which does not increase the amount to be contributed in the form of duties by New South Wales by something like a million sterling. Of course, this amount will have to be raised, and the most economical course would be to relieve the public of taxation in other directions. But

the Ministry are indulging in the hope that they will be allowed to stay in office to spend it. Half is to go in old-age pensions and half in various works.

South Australian public finance is, as a rule, closely and economically managed, and no trouble is to be expected to occur in that State.

Generally it is doubtful whether the ordinary revenue and expenditure accounts of the several States will fall into normal lines until the Commonwealth tariff is not only settled, but some experience of Commonwealth finance has been gained. In the meantime, however, it is a regrettable matter that the sense of responsibility of the public treasurers has been weakened.

MINING MATTERS.

The mining share markets throughout Australia continue to be in a very depressed condition. The primary cause is that no field is showing results to justify the quotations that have ruled in the past, or are still ruling. The market is not one for buyers, and the public are leaving it almost severely alone. Apart from gold mining, there are three great groups of stocks that have been extensively dealt in, viz., the Broken Hill, the Lyell, and Chillagoe. With regard to the Broken Hill group, there can be no question about the enormous extent of the sulphide deposit, and of the dividend-paying character of the mines for very many years to come. But the silver and gold contents of the ore treated are less than formerly, and the mine is more dependent upon the output of lead, and its market value. The position of the Mount Lyell mine has attracted attention, in consequence of the publication of a recent report on the probable extent of the ore bodies drawn up by the manager, Mr Sticht. This report supplements that which was published three years ago, but differs considerably. As at March 31, 1898, the estimated quantity of payable ore was 1,781,300 tons. The quantity extracted and treated during the three years is 752,056 tons (which probably includes some inferior ore that had to be removed). The balance is 1,029,224 tons, but the new estimate gives 978,337 tons, the difference being nearly 51,000 tons. But the really serious part of the matter is that on a certain range of market values (£51 10s per ton for copper, 2s 2d for silver, and £4 4s for gold), the value of the ore was estimated in 1898 at 55s per ton, but on precisely the same basis now the value would be only 34s 7½d per ton. The copper contents are less, and the gold and silver contents are much less, than was anticipated. But the market value of copper and silver are higher, and Mr Sticht calculates the average value of the payable ore at 43s 7d, taking £70 for copper, 2s 3d for silver, and £4 5s for gold. Of non-payable ores at present estimated there are nearly 3,000,000 tons, but they are only valued at 15s 4d to 17s 10d. The fact is that the mine is becoming poorer the lower it goes down. Purchases of siliceous ores are being made from other mines, but several of these mines are already giving out, and without further discoveries the Mount Lyell Company cannot depend much upon supplies from outside. The position is practically that 978,337 tons of ore, of an estimated value of 43s 7d per ton, and yielding a net profit of about 15s per ton, have, with whatever extraneous assistance that may be procurable, to reimburse the shareholders a paid-up capital of £825,000 (not to speak of premiums received on shares, £141,393, placed to reserve), and to give them dividends. There are always possibilities, however, but the value placed on the concern by the market certainly appears to be high, and the public are unresponsive.

The Chillagoe undertaking progresses rather slowly. Rumours have been circulating to the effect that the mines comprised in the district are similar to the Mount Lyell in becoming poorer as they are opened out. The directors have just proceeded to the field to make further investigations, and in the meantime the market is nervous.

Not only are the large fields referred to in a less favourable condition than formerly, but for the last two or three years hardly any fresh development has been made. It is not surprising, therefore, that mining enterprise and the mining market are flagging. A new discovery of an important character is wanted.

ENGLISH RAILWAYS IN THE PAST HALF-YEAR.

The results of working on the English railways for the first half of the current year have turned out to be worse even than was anticipated. In the two previous half-years dividends had declined, despite a large augmentation in gross receipts; but in the period under notice there was a shrinkage in receipts, and with it a still larger growth in expenditure than has taken place before, with the result that the dividends are the lowest declared for many years.

The fifteen companies with which our review deals have a total ordinary capital of £239,825,816, on which the dividends for the half-year amount to £3,703,522, equal to a rate of 2 2/16 per cent. per annum. At the end of June, 1900, the ordinary capital amounted to £285,465,577, and the dividends paid thereon to £5,050,738, giving an average rate of 3 2/16 per cent. per annum. There has been a reduction in actual amount of dividends of £1,347,216, and a fall in the average rate of over one per cent. per annum. The following tables show how the loss in net revenue has affected each of the companies:—

I.—Gross Revenue Account.

	Gross Revenue.*	Working Expenses.	Net Revenue.	Dividend.

Total	— 58,680	+ 1,257,889	— 1,316,569	— 1

It will be seen that the loss of gross revenue was not universal, the Great Eastern having a fairly substantial increase, and the Great Western, Brighton, South Eastern and Chatham, and South-Western companies securing a moderate improvement as compared with the first half of 1900. In these cases, however, the expansion was more than absorbed in increased expenditure, while those companies which failed to maintain gross receipts suffered the heavier loss of net revenue, since they found it impossible to cut down expenses in proportion.

From the following table it will be seen that the passenger traffic retained a fair degree of elasticity, all the companies except the last three showing increased receipts from this source. It was in the heavy traffic that the loss of gross revenue occurred, particularly minerals. In neither case, however, could it have been regarded as serious in itself, it was only when added to the growth in expenses that it became important. The falling-off in goods traffic is equal to only 1½ per cent., and that in minerals to 7 per cent.

Our next tables contain practically the whole secret of the half-year's results, as they show exactly where the great expansion in working expenses has occurred. The first table gives the amount absorbed by each of the principal spending departments of railway organisation, and of these the locomotive department naturally shows the greatest increase, as it is to that branch that the cost of fuel is charged. The second table gives a more detailed analysis of the expenditure.

	+ £75.4		+ £201.0		+ £652.2		+ 1·54	

The wages bill appears to have almost reached a maximum, the increase in that item amounting only to 0·6 per cent. Great stress has been laid upon the effect of the increased cost of coal, and no doubt that has been an important factor, the increase of £652,200 being equal to no less than 28·1 per cent. This, too, follows upon an increase of nearly 30 per cent. in the first half of 1900, so that with the fall in prices which is going on there should be a wide field for future economy upon this item. The cost of material was only a slightly less important factor in bringing about the disastrous results of the half-year, and it is less easy to understand than the rise in the cost of coal, since the prices of steel rails and other iron and steel materials reached the highest point at the end of 1899, and in the first quarter of 1900. The probability is that the materials delivered in the past half-year were under contracts entered into fully a year before.

We have added to the table above columns showing the cost of fuel per train mile run, and this brings out very forcibly the fact that the increased cost was not owing to larger consumption, but to increased cost. The companies have, in fact, as will be seen from the next table, all reduced the mileage run, and have, consequently, used less fuel. If the comparison is carried back further, the excessive rise in the cost of fuel is rendered still more striking, since, in the first half of 1899, the average cost of fuel per mile run was only 2·9d., as compared with 5·1d. per mile in the half-year just closed.

148,616,000	—3,864,000	Total	13,872½	+ 106½	1,201½

† Including mileage run for other companies.

The amount of capital expended at the end of June 30th last was £747,861,000, as compared with £731,908,000 at the corresponding period in 1900, being an increase of £15,963,000. That, as well as the contemplated future expenditure, is somewhat smaller than was the case a year ago, but there is little sign of slackening in the rate of capital expenditure, either actual or contemplated.

We have in previous issues endeavoured to point out the causes that have led to the present condition of British railways, and have, therefore, on the present occasion confined ourselves mainly to showing exactly where the growth of expenditure and capital has affected the accounts of the past half-year.

OUR FOREIGN TRADE.

After allowing for the fact that there was one working day more this year than last, the returns of our foreign trade for the month of July are fairly satisfactory, since they indicate that the volume of business was fully as large as in the corresponding month last year. A further considerable increase is shown in the value of the imports, due to large receipts of corn and textile materials, while although there is a small decline in exports, it is fully accounted for by the lower price of coal. Our imports for the month are valued at £43,028,822, as compared with £40,264,167 in July, 1900, the increase of £2,764,658 being equal to 6·8 per cent. For the seven months of the current year the value of imported commodities amounts to £305,506,327, as compared with £295,899,033 in the corresponding period last year, showing an increase of £9,607,294, equal to 3·2 per cent.

Of the increase of £2,764,000 last month, nearly £800,000 was in corn, chiefly wheat and maize. The increased wheat supplies came mainly from Canada, Australasia, and India, the last-named, it is satisfactory to note, being able to send 405,700 cwts, as compared with none at all last year. This is practically the first shipment of wheat from India since the famine. Argentina supplied a smaller quantity of wheat, but shipped a much greater quantity of maize than in July, 1900. Roumania has, however, taken the lead in the supply of this grain, sending 2,158,400 cwts in the month, and 5,038,400 cwts in the seven months, against only 257,000 cwts and 711,000 cwts in the same period last year. There was a general increase in the various kinds of dead meat imports, but while butter was £400,000 more in value than in July last year, a decline of £130,000 occurred in cheese, chiefly owing to smaller imports from Canada. There was a heavy falling-off in sugar, due, of course, to the large receipts prior to the imposition of the duty; but the imports for the year to date still show an increase of £465,000, compared with the corresponding period last year.

As regards metals a substantial increase occurred last month in the value of copper imports, while there was a further falling off in the receipts of Spanish iron ore. Lead, quicksilver, and tin each show increases compared with the corresponding month. An increase of £1,190,000 is shown in imports of textile materials, of which £486,000 was in cotton and £483,000 in wool. These gains too are due to the larger quantities imported, and not to higher prices. The cotton imports for the month amounted to 713,765 cwts, as compared with 507,476 cwts in July last year, while our receipts of wool rose from 26,015,268 lbs to 48,304,019 lbs. Imports of manufactures were about £350,000 more than in July last year, a falling-off in French silks being offset by an increase in woollen goods from the same country, and by increases in leather, jute, and cotton manufactures.

Exports of British products and manufactures are valued at £24,385,771 for the month of July, and £163,182,169 for the seven months ending July, showing decreases of £164,786 and £5,745,152, equal to 0·7 and 3·4 per cent. respectively. The small decline for the month is due to the greatly reduced price received for coal exports, as, although the shipments reached 4,107,422 tons, as compared with 3,981,021 tons in July last year, the value was only £2,830,490, as against £3,345,490 for the smaller quantity last year. For the seven months the reduction in quantity is equal to only 3·7 per cent., while in value it amounts to 13·6 per cent. Our shipments of cotton yarn, and piece goods were satisfactory, owing mainly to the better demand for India, though increased quantities went also to Turkey, Egypt, and China, and it is somewhat surprising to observe that Germany took more both of yarn and piece goods last month than in July, 1900. On the other hand, reduced quantities of piece goods were sent to most of the South American countries, to Japan, and to Belgium. Linen goods show a small reduction, an increase for the United States being off-set by shrinkages in the exports to Canada and Australasia. Woollen and worsted goods again show decreases as compared with last year, mainly on account of reduced takings by Canada, the United States, and Argentina.

Metals and metal goods show a continued falling off in value as compared with last year, but so far as it is not due to lower prices it is mainly confined to pig-iron and bar and angle iron. It is the German demand for pig-iron that has so greatly fallen off, our exports there for the month being worth only £48,058, and for the seven months £372,807, as compared with £146,775 and £1,071,175 respectively in these periods last year. In bars and angles the shrinkage was fairly general, though most marked in the case of Japan, China, and South America. Railroad iron shows a moderate increase both in quantity and value, the gain being in the shipments to Canada, Australia, and New Zealand. Rather heavy decreases are shown in unwrought steel and cast and wrought iron, the latter being entirely due to lower prices, as the quantity was larger than in July last year. Tin-plates show a small increase, the United States taking more than in July of either of the two previous years. Machinery exports show a reduction of £74,000 for the month, and £866,000 for the seven months, which is probably accounted for by the fall in prices. Last month the decline was mainly in textile machinery for countries in Europe and for the United States. There were increases in exports of apparel, chemicals, earthenware, railway carriages and trucks, books and stationery, while decreases occurred in arms and ammunition and seed-oil.

THE DIRECTION OF TRADE.

The usual quarterly returns, showing the direction of our foreign trade, are appended to this month's Board of Trade publication, giving the figures for the quarter and half-year ending on June 30th last. The following statement shows the trade with British possessions and foreign countries respectively for the six months:—

HALF-YEAR ENDED JUNE 30.

	1901.	1900.	1899.
Imports from—	£	£	£
British possessions	52,370,000 ..	55,302,000 ..	49,426,000
Foreign countries	209,873,000 ..	200,264,000 ..	187,188,000
Total imports ..	262,243,000 ..	255,566,000 ..	236,614,000
Exports to—			
British possessions	51,061,000 ..	44,750,000 ..	42,497,000
Foreign countries	87,735,000 ..	99,627,000 ..	84,024,000
Total exports....	138,796,000 ..	144,377,000 ..	126,521,000

The figures show that while we have taken less from our colonies than last year, we have sent them over £6,000,000 more of our products, while on the other hand foreign countries have taken nearly £12,000,000 less from us, and we have taken from them £9,600,000 more.

The reduction in the value of imports from British possessions was largely due to the great fall in the price of colonial wool, and though we received considerably more of the product from Australasia than in the first half of 1900, we paid about £1,000,000 less for it. There was a reduction in imports from Canada, chiefly wheat, bacon, and cheese, while we got more from South Africa, the supplies of wool being more than double the quantity received in the corresponding period last year. Imports from India fell off by about £1,400,000, mainly owing to the cessation of shipments of wool and hides, which came in large quantities last year owing to the compulsory slaughter of animals during the famine.

The increase in imports from foreign countries took place, as usual, mainly in the trade with the United States, cotton alone showing an increase of £3,126,000, and wheat and flour about £2,500,000, while there were substantial increases in other kinds of corn, dead meat, and dairy products. From Egypt we got about £500,000 worth less cotton than last year. Imports from European countries showed no great variations, but a substantial decrease occurred in the imports from Argentina and Brazil, the former sending greatly reduced quantities of wheat, and the latter less cotton and coffee.

Of the increase, amounting to £6,300,000, in exports to British possessions, £3,000,000 was in the value of cotton goods shipped to India, which constitutes a strong testimony to the recuperation in our Dependency from the effects of the famine. Our total exports to the British East Indies amounted to £20,232,000 in the half-year, as compared with £16,469,000 in the corresponding period of 1900. There was a decrease of about £770,000 in exports to Australia, chiefly metal manufactures. South Africa, however, took £1,800,000 more than in the first half of 1900, which was pretty generally distributed, but bulked largely in apparel and boots and shoes. There was a falling off in exports to Canada, consisting chiefly of tin-plates and other iron manufactures.

The decline of £12,000,000 in exports to foreign countries was due to a general shrinkage. Germany took £2,000,000 less, mainly in pig-iron and other metals and coal. The latter article, of course, accounted for a large part of the decrease in exports to most European countries. Shipments to the United States were worth £2,000,000 less than last year, the falling-off extending

to most classes of exports. There were also heavy declines for Japan and China, chiefly in yarns and textiles. The smaller South American Republics took rather more of our goods than last year, but owing to the adverse conditions in Mexico, Chili, and Brazil, each of these countries showed a falling-off. There was, however, a small increase in the value of exports to Argentina.

ARGENTINA.—THE DEFEAT OF THE UNIFICATION SCHEME.

BUENOS AYRES, July 10th.

WITHIN little more than a week the position here has changed with a sudden violence which few, if any, anticipated, at least so soon, although political matters have been looking more and more turbid for some time past, as the discussion of the Unification scheme in the newspapers became more excited, and it appeared to approach fruition with the sanction of the Bill by the Argentine Senate with only one dissentient voice, that of the ex-President of the Republic, Dr Uriburu. This tame, mute sanction in a few minutes, without even a semblance of discussion or debate—if only to save the decorum of the Upper House in appearance—further exasperated the public mind, and increased the bitterness of the Opposition papers. Then, on the 26th ult., which was declared by the Government a public holiday in honour of its being the 80th anniversary of the birth of General Mitre, the *Nacion*, the latter's organ, announced formally that he considered the "Acuerdo," or political coalition between his own party and General Roca's, the National Autonomist party, to be at an end, as it was no longer of any benefit to either the people of the Republic or the two political groups concerned. This unexpected announcement, if made during a normal condition of the public mind, would not have borne so much importance, but, coming on the very day on which the whole people of the country were doing honour to one of Argentina's greatest and noblest sons, it was generally taken to mean disapproval of the Government's policy on the burning question of the day, Unification, especially as the aged General did not attend the sitting of the Upper House, at which the Bill was so subserviently voted, saying that he would not sanction it even by his presence, much less by his vote. Meanwhile, the students of all the Faculties in the University were agitating vigorously, and preparing to present a petition to the House of Deputies against the Bill. Dr Terry, ex-Minister of Finance, and Professor of Political Economy in the University, espoused their cause, and gave a lecture from his chair, in which he ably exposed the empirical nature of the Unification scheme and its violation of sound financial principles. This condemnation of the Unification project from such a quarter was eagerly hailed by the Opposition papers, and, of course, pooh-poohed by the two organs that supported the Government.

On the 3rd inst. the students, 3,000 strong, marched in a body to Congress Hall, and remained quietly in the Plaza while three delegates from their body entered and presented their petition against the Unification project. This petition was admirably worded in respectful and moderate terms, and created an excellent impression when published. The petition once presented to the House of Deputies, the students proceeded to march through the principal streets as a manifestation; and then the mischief began. The unruly elements of the population gathered in their train, and as the ever-swelling crowd came in front of the offices of the Government organ, *Tribuna*, in Calle Mitre, the shouting and excitement became serious, and repeated volleys of stones destroyed all the windows and glass doors of the office of the newspaper. Then the crowd rushed for the office of the *Paiz* (Dr Pellegrini's paper), and its office windows speedily shared the same fate as those of the *Tribuna*. Next day, the 4th, both offices had another visit from the mob, which subsequently proceeded to the private residences of President Roca and Dr Pellegrini, the windows and doors of which were demolished with all kinds of missiles. The speedy arrival of troops prevented further outrage at either residence; and the mob turned back to the Government House in the Plaza, where the demonstrations became every hour more formidable, and blood began to flow. President Roca was not long in grasping the situation, and acting on it with the energy of a soldier. The Senate was sitting, and he sent it a petition to be allowed to declare a state of siege in the capital of the Republic for six months. In half an hour the petition was acceded to, with only two dissentient votes, that of ex-President Uriburu being one of them. At 8 o'clock at night the Deputies met. Their sitting lasted till after midnight, but they finally voted the state of siege, with only fifteen votes *en contra*. Martial law was at once proclaimed. Next day the Finance Minister, Señor Berduc, resigned, and on the following one the House of Deputies shelved the Unification Bill, on the receipt of a message from the Executive to the effect that it had abandoned the measure. At the grand banquet given in the Government House on the night of the 8th, to celebrate yesterday's patriotic anniversary, President Roca called General Mitre aside, asked him for his frank opinion on the state of affairs, and offered him the vacant portfolio of Finance for his son, Señor Emilio Mitre, now in Paris. The Argentine Nestor advised the President to form a Cabinet exclusively from the members of his own—the Nationalist—party, and rule on its lines, and no others. As for the portfolio of Finance, his son was too delicate in health to undertake such an arduous post, but Dr Marco Avellaneda, President of the Chamber of Deputies, would be a safe man for the post in the present emergency. To-day President Roca offered the post to Dr Marco Avellaneda, and his acceptance of it will be announced to-morrow.

Never in the troubled history of this country has such a swift, complete, and far-reaching change in the aspect of its affairs been brought about by the energy and decision of any of its rulers, and without bloodshed, as the two or three lives lost in the street disturbances might have been hundreds or thousands had the outburst of public indignation against Unification been allowed its way for twenty-four hours more. The declaration of the state of siege stopped it, and the withdrawal of the obnoxious measure left it without a *raison d'être*. It was a masterly double stroke of wisely directed ruling energy that has quite saved General Roca's prestige, which was beginning to totter ominously under the results of the mistaken financial policy which he unfortunately allowed to be forced on him by officious and interested outsiders who had no right to give him any advice at all, and whose empirical methods, based on their own speculations, would have brought on a revolution but for the energetic inspiration and swift action that has consigned them to oblivion and the condemnation of the Argentine public. Public opinion is now quite calm, and a most hopeful feeling has suddenly succeeded the pessimism and distrust which the sanction of the Unification Bill by the Senate brought to explosion point. Nothing is, of course, yet known as to the intended policy of the new Minister of Finance; but his antecedents and public statements on many occasions give assurance that he is a decided opponent of the legerdemain juggling to which the finances of his country have been so audaciously subjected for some years past. He was a steadfast opponent of the Repudiation-Conversion Law, which has done such dire harm to the country's trade and industries; and it is taken for certain that the repeal—or, at least, radical amendment—of this mistaken enactment will be one of the first essential measures he will propose to Congress. In monetary and commercial circles the radical change in the aspect of financial matters has created a most hopeful feeling, and general expectation that, for the remainder of his term of office, President Roca will not allow himself to be again led into the path of charlatan financing.

BUSINESS NOTES.

Trade and the Drink Duties.—Additional evidence of a slackening of trade activity and a diminution in the purchasing power of the people is afforded by the Excise returns as to the production and consumption of beer and spirits. According to these, the quantity of beer retained for home consumption in the first six months of the current year was 16,903,900 barrels, as compared with 17,293,400 barrels in the first half of 1900, and 17,444,700 barrels in the like period of 1899. A decline in the consumption of beer might be attributable to the arsenic scare, but when we turn to the figures relating to home-made spirits, which have not been affected by any such adventitious cause, we find that these also show a falling off, which is all the more noteworthy, because it comes after a period of continuous expansion. These figures are:—

Consumption of Home-Made Spirits Six Months Ending June 30th.

	1901. Gallons.	1900. Gallons.	1899. Gallons.
England	12,046,247	12,256,132	11,267,395
Scotland	3,534,652	3,677,597	3,362,681
Ireland	2,013,280	2,159,129	1,938,041
United Kingdom	17,594,179	18,092,858	16,568,117

That we should be cutting down our drinking bills, as these figures show we have been doing, may be regarded by temperance advocates as the reverse of an evil. But there can be no doubt that any greater abstinence that may be displayed is an enforced abstinence, due to lessened means, and from the purely fiscal point of view, it is certainly not pleasant to see the revenue flagging while expenditure is mounting up with phenomenal rapidity.

Rand Mining.—In the latter part of last week, and for a day or two after the Stock Exchange re-opened, on Tuesday, the market for Rand shares showed a disposition to shake off the lethargy which has, with spasmodic interruptions, characterised it for more than a twelve-month, and in a few instances quite a respectable advance in quotations took place. The lever was provided by the publication of a report stating that on the Turf Club claims, the property of the South African Gold Mines, the Rand main reef series of auriferous deposits has been struck by a diamond drill at a depth of 4,825 feet from the surface. The Turf Club area is situate about a mile and a-half from the outcrop of the main reef series, and it is stated that the striking of the reefs at the depth mentioned proves that they tend to flatten out considerably as they get farther away from the outcrop, from a dip of over 70 degrees in the centre of the district to something less than 30 degrees at the point where the boring has taken place. Hitherto the deepest bore in the Rand district was one of 3,250 feet, on the Bezuidenville area, about a mile distant from the Meyer and Charlton Mine, and the new strike, of course, goes towards confirming expert opinions as to the continuance of the main reef series. At present, however, there is no information available as to the value or the size of the reefs intersected, and it is therefore impossible to judge of the importance of the discovery, either to the owners of the particular property or to the companies whose claims lie between the outcrop and the Turf Club area. In any case the initial expenditure of sinking and equipping a mine where the auriferous deposits will have to be worked at a depth of nearly a mile from the surface must be a very heavy one, and although Mr Hays Hammond predicted that mining in the Rand district would be practicable and profitable at a vertical depth of 7,000 feet, the prediction has yet to be put to the test. And even should the Turf Club property yield satisfactory results, it is not easy to see how it would beneficially affect the outcrop and deep-level companies which are already producing gold, or will do so when labour becomes available. It is not to be wondered at that the influence of the bore-hole report was of a very transitory character, or that the market has relapsed into a condition of suspended animation, tired of waiting for the end of the campaign and the resumption of mining operations upon something like the old scale.

Responsibilities of Solicitors.—In the course of the past year or two the judges have meted out exemplary punishment to many of the solicitors who have been reported upon by the Incorporated Law Society as having been guilty of various forms of professional misconduct, and on Thursday last, four solicitors were ordered to be struck off the rolls, and a fifth was suspended for two years. In some of the cases the offences were of such a gross character that the judges had no hesitation in inflicting the full penalty; but in one instance, where the salutary punishment of two years' suspension was accorded, the defendant solicitor was evidently taken by surprise. The solicitor was charged with having assisted a money-lender "to take advantage of the youth and inexperience of a young man named Bartlett, and had received exorbitant remuneration for so doing, and that, when he was acting as solicitor for Bartlett, he led him to accept from another client, a money-lender, a loan at 300 per cent." Mr. Justice Kennedy pointed out that even when the defendant was not acting as solicitor for Bartlett, it was not consistent with his duty to be a party to this young man, who was obviously acting foolishly and without professional advice, entering into these transactions. His Lordship added, "it was no answer for him to say that he was the money-lenders' solicitor, and was therefore justified in seeing that his clients got these unconscionable advantages. The respondent should have said that this young man ought to have advice before entering into these transactions. This young man later became conscious that he was getting into great difficulties, and he thereupon asked the respondent to become his solicitor, and the respondent accepted that verbal retainer. He should then have prevented a repetition of the previous folly, but instead of doing that he took part in a further transaction of the same character, Bartlett getting a loan of £500, from which £150 was deducted for two months' interest." Later on Mr Justice Darling said it must be clearly understood that the respondent's conduct in assisting these money-lenders to impose unconscionable bargains on Bartlett, even when he was only their solicitor and not Bartlett's, was most improper and unprofessional. The decision of their Lordships in this case should have the effect of making solicitors realise that their position as officers of the Court carries with it the responsibility of preventing as far as they are able reprehensible practices, whether or not in the interests of their clients. It is much to be wished that the judges would go a step further in the direction of bringing to book those members of the legal profession who, in their efforts to serve the interests of company-mongers, and to keep them, as they think, within the four corners of the law, are the indirect means of inflicting grievous losses upon the investing public.

London Omnibus Earnings.—The half-yearly reports of the two principal metropolitan omnibus companies, the London General and the London Road Car, which have been lately issued, exhibit unsatisfactory results and a material lessening of the rates of dividend, even with assistance from the reserve funds. The General Omnibus Co. takes £5,000 from its general reserve fund to make up the £25,108 absorbed in the dividend at the rate of 6 per cent. per annum, while the London Road Car, in view of the circumstances, "which the board deemed to be exceptional," have transferred the sum of £2,500 from the general reserve fund to provide a distribution at the rate of 3 per cent. per annum, requiring £5,760. The dividends are much smaller than those paid for the corresponding period of each of the four preceding years, as will be seen from the subjoined table:—

	1901. %	1900. %	1899. %	1898. %	1897. %
General Omnibus	6	10½	10½	10½	10½
Road Car	3	10	8	8	10

The General Omnibus Company carried 101,110,000 passengers, as against 98,429,000, the average number of vehicles running having risen from 1,323 to 1,373; but the traffic receipts were £5,431 less than in the first half-year, and there was a total decrease in the revenue from all sources of £5,766, the average receipts for passengers per omnibus per day having fallen from £2 9s 10¾d to £2 7s 3d. On the other hand, the expenses increased £15,857, partly owing to the additional number of omnibuses running, and increased law charges and compensation allowances, while it is added that "the closing or partial closing of important thoroughfares for laying down Government telephones and electric light mains seriously affected the earnings of many of the companies' services." The Road Car Company also had an increase in the number of passengers carried from 32,446,000 to 33,394,000, and the gross receipts rose from £191,387 to £196,104. The weekly average traffic receipts per car fell, however, from £17 0s 11d to £16 19s 5d, while the total expenditure increased from £162,139 to £187,461, the weekly average expenses per car having been £16 7s 10¾d in contrast with £15 0s 5d. Both companies refer to the unseasonable weather in the earlier part of the half-year, but there can be little doubt that the main causes of the unsatisfactory results are the long-journey competition of the Central London Railway, and the increased working costs relatively to the gross receipts. The chairman of the Road Car Company, however, expressed the opinion that higher dividends would be forthcoming in the future, but his reference to the fluctuations in the distributions between 10 per cent. and *nil* cannot be regarded as particularly encouraging to investors who purchased the company's shares a year or two ago, on the assumption that the high rate of dividends paid for some years would be maintained for an indefinite period.

British Trade with Cuba.—In his report upon the trade of Cuba in the year 1900, Mr Consul-General Carden predicts a new era of business prosperity for that island, and strongly urges British merchants and manufacturers to take advantage of the opportunities for extending their trade there that are likely to present themselves. The immediate effect of the cessation of Spanish sovereignty in Cuba has been that the imports of Spanish merchandise, being deprived of the protection afforded by the preferential tariff duties, have fallen in average annual value by about £4,000,000, and a market of that amount has already been thrown open to the world's competition. Further, there are, in Mr Carden's opinion, strong grounds for believing that in two years' time the sugar crop will be not under 1,000,000 tons, and that this increase, reckoned at the prices which ruled during the past year, would represent an addition of over £9,000,000, or nearly 100 per cent., to the present value of the exports. Hence, without taking into consideration the possible development of any other branch of the exports, the prospects of the sugar trade alone are sufficient to warrant the belief that the purchasing power of Cuba will be very largely increased within the next two or three years. Mr Carden quite recognises that the chief gain from the commercial development of Cuba will be reaped by the United States, but he holds that as the creation and development of new sources of wealth can never be to the exclusive advantage of any one country there is every reason for believing that the United Kingdom also will be able to profit by the prosperity of the island, "in a degree which must depend on the adaptability and energy shown by British merchants and manufacturers in studying and providing for the wants of that market."

The Pig-Iron Production of the United States.—The American Iron and Steel Association report that the production of pig-iron in the United States in the first half of the current year amounted to 7,674,613 tons (of 2,240 lbs), as compared with 7,642,569 tons in the corresponding six months of 1900, and 6,146,673 tons in the second half of that year. The total number of furnaces in blast on June 30th last was 259, against 232 on December 31, 1900, and 283 on June 30, 1900, and the stocks of pig-iron unsold in the hands of manufacturers and their agents, which amounted at the end of December last to 442,370 tons, had been reduced on June 30th to 372,560 tons. It is added that present indications point to a lessened production during the current six months as compared with the first half of the year.

The New German Tariff.—"The Board of Trade Journal" of this week contains a translation of the section of the proposed new German Customs Tariff relating to iron and steel and manufactures thereof. A translation of the sections relating to wool and cotton and woollen and cotton yarns was published in last week's "Journal," and it is announced that it is in contemplation to publish, at as early a date as possible, a Parliamentary paper containing a full translation of the proposed tariff. Meanwhile, a copy of the tariff itself in original may be seen at the Intelligence Branch of the Board of Trade.

Wills and Bequests.—The *Illustrated London News* gives the following list of wills proved, with the amount of personalty in each case:—

	£
Mr Thomas Spencer, late of The Grove, Ryton, Durham	577,195
Mr Henry Charles McCrea, late of Warley House, Halifax	237,576
Mr Frederic William Henry Myers, late of Leckhampton House, Cambridge	37,370
Mr William King, late 11 Queen Victoria street	34,183
Mrs Mary Lidbrooke Hall Martin, late of 26 Holland road	33,457
Mr Edward Lovejoy, late of The Grange, Iver, Bucks	20,400
Rev. Charles William Holbech, late Farnborough Hall, Banbury	19,435

THE directors of the Yorkshire Insurance Company have appointed their secretary in London, Mr James Hamilton, to the position of general manager of the company, in succession to the late Mr J. A. Cunninghame. Mr Philip L. Newman, B.A., F.I.A., and Mr Edmund A. Birks are associated with Mr Hamilton as actuary and sub-manager respectively.

THE gold yield for New South Wales for last month amounted to 33,018 ozs., valued at £116,051, as compared with 53,464 ozs., valued at £181,743, in July, 1900. The yield for the last seven months amounted to 158,687 ozs., valued at £550,651, as compared with 209,820 ozs., valued at £738,606 in the corresponding period of 1900.

THE Queensland gold returns for July show a yield of 59,700 ozs.

THE Argentine Municipal Loans Committee regret to announce that they have received the following cablegram from their agent in Buenos Aires, and have instructed their lawyers to commence proceedings in the Argentine Courts accordingly:—"I can do nothing Municipality of Cordoba, Municipality of Santa Fé. I cannot too strongly recommend commence legal proceedings against Cordoba, commence legal proceedings against Santa Fé."

WE understand that the directors of the Metropolitan Railway Company have notified the District Company that they will not insist on waiting a month before going to the Board of Trade on the question of the electrification of the line, but will agree to go at once

THE court of directors of the London and India Docks Company have decided to exercise a further measure of their statutory powers by raising the 1s tonnage dues on shipping to 1s 6d. This increase will apply also to vessels coming in under part cargo rates. The alteration will take place on and after January 1st next.

Foreign Correspondence.

FRANCE

(FROM OUR OWN CORRESPONDENT.)

PARIS, Aug. 8.

The returns of the Bank of France for this week, last week, and the corresponding week of last year are as follows:—

BANK OF FRANCE RATES.

	%
Discount	3
Advances on bullion	1
Advances on public securities	3½

The above return, compared with that for the preceding week, exhibits the following changes:—

INCREASE.	Francs.
Private deposits	6,155,242
Cash	717,284

DECREASE.	Francs.
Circulation	85,095,865
Treasury account	7,331,629
Discounts	139,369,104

The decrease in the circulation and the discounts is due to the paper that ran off in the branches at the end of the month, which only appears in this week's return. Private discount has declined to 1⅝ per cent., and choice paper has even been taken at 1½ per cent., but the Bank maintains its rate at 3 per cent. with the view of supporting the market rate as far as possible. Cheques on London are demanded, and the rate during the week has been as high as 25f 21c, but is easier to-day at 25f 20½c. No gold operations with foreign countries are reported. The cash to-day and last week was made up as under:—

	August 8. Francs.	£		August 1. Francs.	£
Gold	2,452,226,596	= 98,089,064	..	2,452,428,591	= 98,097,144
Silver	1,120,039,982	= 44,801,599	..	1,119,120,703	= 44,764,828
	3,572,266,578	= 142,890,663	..	3,571,549,294	= 142,861,972

The following were to-day's closing prices and the variations on the week:—

The following were to-day's closing prices, with the variations on the week, in stocks and shares not comprised in the table above:—Brazilian Fours 66f 50c, — 70c; Spanish Exterior 70f 37½c, — 32½c; Portuguese Threes 25f 75c, + 15c; Russian Old Threes 85f 70c, + 30c; Chinese Fours 101f, + 10c; Ottoman Bank 527f, — 4f; Meridional of Italy Rails 680f, — 1f 50c; North of Spain shares 179f, — 2f; bonds 289f, + 8f; Saragossa shares 247f, — 4f; bonds 352f, + 2f; Tharsis shares 155f 50c, — 1f; Cape Copper 125f 50c, — 2f; De Beers 855f, — 1f 50c; Chartered Company 77f, — 75c; Consolidated Goldfields 191f 50c, + 50c; Ferreira 503f, — 3f; Geldenhuis 155f, + 3f 50c; Geldenhuis Deep 252f, + 1f; Transvaal Land 82f 75c, — 75c; Buffelsdoorn 16f 50c, — 2f; Randfontein Estates 77f 25c, — 25c; Robinson Mines 229f 50c, — 1f; Oceana 47f 50c, — 1f 50c; Simmer and Jack 156f, — 50c; East Rand Proprietary 186f 50c; Rand Mines 1,037f, + 1f; Lancaster 60f 50c, — 50c; Village Main Reef 204f, + 1f; May Consolidated 105f, — 2f; Robinson Bank 81f.

After passing several weeks in the discussion of the Workmen's Pension Fund Bill, the Chamber of Deputies decided on opening an inquiry during the summer vacation to ascertain the opinion of the Trades Unions on the question. A number of reports have been already received at the Ministry of Commerce, and these are not generally favourable to the scheme, although naturally in favour of the principle of pensions to aged and infirm workmen. Some of the associations denounce the Bill in violent language. The National Council of the *parti ouvrier* has issued a manifesto, in which it declares that the Bill is a disguised swindle that for thirty years would place at the disposal of the capitalist Government immense sums obtained from the working classes, with which the State would pay off a great part of the National Debt without advantage to workmen. The Council objected to workmen being called on to contribute in any manner to the Pension Fund by an appropriation from their wages, also to the age of 65, at which the pension would be payable, as before that age 94 per cent. of the workmen would have died from fatigue, malady, or privations. The Council protested against foreign workmen in France being compelled to contribute personally and through their employers while being excluded from the benefits of the fund, and demanded that the age for the pension should be reduced to 55 years, and that the amount should be raised from 300f a year to 365f. As proposed, the Bill was inacceptable. A manifesto from a committee sitting at the Labour Exchange is also hostile to the Bill, declaring that the funds should be obtained from the profits of the masters without any direct contribution from the wages of the workers. Some smaller provincial associations are, however, willing to accept the measure, believing that if the right of workmen to a pension were established, the means might be made acceptable to the working classes.

At the monthly meeting of the Paris Political Economy Society, held this week, an interesting paper was read by M. A. Raffalovich on the Protectionist movement in Germany, the proposed new tariff and its probable conse-

quences. The subject was not precisely that which had been announced for discussion, which was, "Is a not distant revision of the treaties of commerce possible?" This question is apparently one that excites interest, judging from the large number of members present in this holiday season. They did not, however, regret their attendance, as the paper read, with the observations introduced, was greatly appreciated. M. Raffalovich related the motive that led the German Government to suddenly publish the tariff on Friday the week before last after having so far kept it secret. It learned that a copy of the treaty had been purchased for 2,000 marks from two Government officials, and was to be published in a weekly paper in London on the Saturday. It then seized the money in the hands of the agent who had negotiated the purchase and itself published the tariff on the day before it was to appear in London, anticipating the bribing journal, which got no value for its money. M. Raffalovich remarked that the publication of the tariff did not include the preamble to the Bill, by which the Government would endeavour to justify by explanations the new policy entered on.

A return is published in the *Journal Officiel* of August 6th of the foreign loans, shares, and debentures for which arrangements had been concluded at the date of July 1st by the appointment of a responsible agent in France for the payment of the stamp and transfer duties and the dividend tax, by which they may be legally negotiated in France. This authorisation does not, however, confer a right to quotation in the official price currents of the French bourses, but only the faculty of purchase or sale on outside markets and through bankers, without exposing the intermediaries to penalties for infractions of the law. The number of securities for which the formalities have been performed is 397. The return indicates the portion of the capital subject to taxation in France, and the numbers of the shares and bonds that may be negotiated. It has been suggested that the Registration Office might add to this information the amount of nominal capital represented, and the total value at recent market prices.

The diplomatic conflict between the French Government and the Porte has produced little effect on the market for Turkish securities. News of it came as a surprise, and even now the questions at issue are very imperfectly known. What appears, however, to be certain is that France is exercising pressure to obtain a settlement of certain claims put forward by French subjects. The most important is reported to be one advanced by a French company which has constructed quays at Constantinople. According to one account, the Turkish Government places obstacles in the way of a working of the quays, and wishes to purchase them, but does not make a satisfactory offer, and delays coming to a settlement. According to another account, the Quays Company has reclaimed land from the sea and wishes to sell it, but the Government refuses permission. No one believes that the dispute will end tragically; the Porte will, of course, have to give way, whatever may be the rights on either side, and a diplomatic victory of France will strengthen the Government at home.

The receipts from shipping on the Suez Canal in July amounted to 8,960,000f (£358,400) against 8,070,000f (£322,800) in the same month of 1900, and 7,840,000f (£313,600) in 1899. The totals for the seven months of the last three years were:—1901, 58,782,374f (£2,351,294); 1900, 51,280,187f (£2,051,207); 1899, 55,178,017f (£2,207,121).

The purchases of Rentes in July by the Caisse des Dépôts et Consignations for the Savings Banks and State Insurance funds amounted in capital to 9,146,985f (£365,879).

Receipts from the Paris octroi taxes on provisions, coal, and building materials during the first seven months of the year left a deficit of 7,105,325f (£284,213) on the Estimates, and 12,162,389f (£486,495) on the same period of 1900.

Returns of the revenue from indirect taxes in the first seven months of the year show a deficit of 56,849,900f (£2,275,596) on the Estimates, and of 89,172,600f (£3,566,904) on the seven months of 1900.

THE UNITED STATES.

(FROM OUR OWN CORRESPONDENT.)

NEW YORK, July 29.

The drought is now off. Refreshing rains have carried away the scare, and while some damage has been done, it is not nearly as much as feared. Speculators, whose expressions of fear for the interests of the country were becoming daily stronger with their success in depressing the values of securities, were brought up sharply, and were disposed to consider more fully the general undoubted prosperity. Even in the worst state, Kansas, the week has brought relief, and only the early maize is beyond saving. Further north the outlook steadily grows brighter, and even in Texas the drought has been broken. Fortunately the States where maize is most severely injured have harvested a very large winter wheat yield. No harm has occurred in the large spring wheat areas, and harvesting will begin about August 1st, under most favourable circumstances.

Heat and needed rains have materially improved the cotton crop outlook, and the tone of advices from the South is better than for some weeks past, though the maize crop in the central Southern States is reported to be suffering from earlier heat and drought. While heat has operated as a disturbing feature in some sections, it is likewise noted that drygoods jobbers are in receipt of considerable reorders for summer wear goods from other sections of the country.

According to *Bradstreet's*, activity in textiles centres in the woollen goods trade. Spring weights opened this week by the largest producing interest are at a decline of 5 to 12½ cents per yard from prices of a year ago, and the lower range of values has attracted considerable business, as the feeling is that, despite the lower cost of wool now as compared with a year ago, the outlook is favourable, and the volume of business already done, in fact, warrants the prediction that some varieties, such as clay worsteds, will be advanced later.

Exceptional activity is noticed at the steel mills not affected by the strike, and the movement of structural material for bridges, buildings, and track elevation is still heavy. Steel bars for agricultural implement makers are firm in price and freely purchased. Railways seek freight cars and rails are sold for delivery next January. Cotton ties, sheets and hoops are commanding a premium. Pig-iron is accumulating, but producers offer no concessions. Orders for tin-plates were not accepted for delivery before October 1st, when the strike began, owing to the over-sold condition of mills, and distant contracts are still taken at unchanged prices, but jobbers are receiving high prices for goods deliverable immediately.

The amount of gold in the Treasury is greater than ever before, while the official statement of revenues and expenditures for the fiscal year ending June 30th shows a larger surplus than was expected. The estimates for the coming year, based on the three weeks already passed, indicate that there will be a large surplus next year.

Detailed figures of the foreign commerce of the United States in the year ended June 30, 1901, were completed by the Treasury Bureau of Statistics to-day. They show total imports, $822,673,016; total exports, $1,487,755,557; and exports of domestic products, $1,460,453,809.

The imports by great classes in the fiscal year are as follows:—Articles of food and animals in 1900, $218,510,098; and in 1901, $222,227,898; articles in a crude condition for use in domestic industry in 1900, $302,426,748; in 1901, $269,763,404; articles wholly or partially manufactured for use in manufactures and mechanic arts in 1900, $88,433,549; in 1901, $79,080,716; articles manufactured ready for consumption in 1900, $128,900,597; in 1901, $130,662,903; articles of voluntary use, luxuries, &c., in 1900, $111,670,094; in 1901, $120,938,095.

The reduction in the value of the imports occurs chiefly in raw silk, hides and skins, wool and india-rubber, and in most of these the reduced value is partially due to reduction of price rather than quantity. Raw silk shows a

reduction from $44,549,672 in 1900 to $29,353,777 in 1901, a decrease in value of 34·1 per cent., while the quantity shows a decrease from 11,259,310 lbs in 1900 to 9,139,616 lbs in 1901, or only 18·8 per cent. In india-rubber, while the imports of 1901 are only $28,455,383, against $31,376,867 in 1900, the quantity imported in 1901 is 55,275,259 lbs, against 49,377,138 lbs in 1900. In wool the importations decreased from 155,928,455 lbs, valued at $20,260,936, in 1900, to 103,583,505 lbs, valued at $12,529,881, in 1901.

Exports of domestic merchandise by great classes were as follows :—

	1901. $	1900. $
Products of agriculture....	944,059,568	835,858,123
Products of manufacture ..	410,509,173	433,851,756
Products of mining	39,267,647	37,843,742
Products of the forest	54,312,830	52,218,112
Products of the fisheries ..	7,743,313	6,326,620
Miscellaneous	4,561,278	4,665,218

Each of these great classes, except manufactures, shows a marked increase over last year. The decrease in manufactures, which amounts to $23,342,588, is due chiefly to the absence of figures showing exports to Hawaii and Porto Rico, which are estimated at about $25,000,000 for the year, and largely consisted of manufactures. In two important articles of manufacture, however, the exports of 1901 fell below those of 1900. The total exports of copper in 1901 were 252,769,328 lbs, valued at $41,260,376, against 333,340,725 lbs in 1900, valued at $55,772,166. This decrease was chiefly due to a reduction in the demand for copper in Europe. In cotton cloths there was a a reduction, due to the temporary suspension of exports to China, to which the exportation of cotton cloths fell from 182,023,681 yards, valued at $8,783,134 in 1900, to 83,859,402 yards, valued at $4,552,534 in 1901.

The exportations by continents in 1901, compared with 1900, are as follows :—

	1901. $	1900. $
Europe	1,136,092,260	1,040,167,763
North America	196,570,118	187,194,625
South America	44,770,888	38,945,763
Asia	49,402,814	64,913,807
Oceania.....	35,377,176	43,391,275
Africa	25,542,301	19,469,849
Totals	1,487,755,557	1,394,483,082

The principal changes in the exports by countries are :—A decrease of $10,000,000 to Japan and $5,000,000 to China, which are due to the causes above mentioned. The exports to Russia in the fiscal year 1901 were $9,545,904, against $10,488,419 in 1900. The principal increases in exports are :—To the United Kingdom, $97,000,000; British North America, $10,000,000; British Africa, $3,000,000; Germany, $3,724,367; Mexico, $1,500,389; Chili, $2,007,161; Peru, $1,464,459; Porto Rico, $2,601,025; and the Philippine Islands, $1,388,615. By far the largest increase was to the United Kingdom, to which the exports were $631,268,263 in 1901, against $533,819,535 in 1900, the total increase being nearly $100,000,000, of which over $50,000,000 was in cotton, about $15,000,000 in breadstuffs, and about $10,000,000 in provisions. The total exports to British territory were valued at $819,551,392, or 55·8 per cent. of the total exports of the year.

GERMANY.

(FROM OUR OWN CORRESPONDENT.)

BERLIN, August 8.

In no quarter of the German business world can any improvement of the situation be noted. In trade there is general stagnation, failures are the order of the day, and the numerous cases of arrest of dishonest directors of companies have gone far towards shaking public confidence. Particularly among the banks the havoc caused by the revelations of the past six weeks has been very great. There are now more financiers and directors of companies in German prisons awaiting trial for dishonest practices than, perhaps, any other country has shown at one time for a century. All this has had a most humiliating effect upon the public conscience. German integrity has hitherto been one of the ideas which German business men dwelt upon with peculiar pride; it was assumed that the name German was equivalent to strict honesty in dealing wherever German business men were known. This pride, and, upon the whole, justifiable pride, has been sadly shaken by the incidents of the past eight months.

When the first mortgage bank directors were locked up last December, the tone of the Press was that the case was so exceptional as not even to denote a tendency to moral laxity in the business life of the country. Now a different tone prevails; and everywhere one hears the admission that, in the mad rush after wealth during the past five years, widespread corruption of business morality has prevailed. The immense economic vigour displayed by Germany during the period in question begot a feeling of exaggerated self-confidence on the part of financiers and directors of companies; it was felt that success was so easily to be grasped that any sort of business venture must prove profitable; and this optimistic feeling certainly did not conduce to the preservation of business morality when the crest of the great wave of prosperity had been passed, and the managers of financial and industrial undertakings were first confronted with changed conditions. Directors who had seen everything succeeding so easily for years were then too ready to argue that any back-set must prove but temporary, and therefore any slight departure from sound business morality could be covered up in the next splendid yearly balance-sheet. How many cases have been uncovered during the past eight months, where rascality first began in a very modest way, with the intention to make everything good at the first favourable opportunity; and then, as the situation grew worse, crime after crime was committed to disguise the original aberration from rectitude.

All this has produced a feeling of shame and humiliation among German business people; and one often hears now the admission that the German reputation for business morality has suffered a blow from which it will take years to recover. It is feared, too, that this will have highly unpleasant practical consequences in Germany's business relations with other countries; that the tasks of the German exporter will grow more and more difficult; and that German financial institutions will be more or less handicapped in their international operations.

The events of the past few months have naturally caused a tendency towards self-examination on the part of the business community, a tendency to look for the weak spots in Germany's business and financial methods—particularly the German method of financing industrial companies by banks, which has always attracted so much attention in the foreign Press and so little here, has come to be recognised as opening great possibilities for mistake and disaster. It is now admitted that the reciprocal relations between banks and industrial undertakings have assumed, in recent years, a serious and even dangerous form. Apart from the dangers inherent in the system itself, it is seen that the personal factor—that is, the assumption of directorships in many industrial companies by bankers—who can naturally know very little about the different businesses involved—exposes such companies, as well as the banks, to the gravest dangers. In illustration of this it is highly interesting to note that the president of the board of overseers of an important Berlin bank resigned that position last week, under some financial stress; and that the statement was made in the financial papers that he was a director in twenty-six joint-stock companies. The list includes five breweries, five metal-working and machinery companies, three banks, three mining and smelting companies, two trust companies, two real estate companies, besides one company each in textiles, sugar, cement, chemicals, and finally a railway.

The case is typical. It shows the spirit of self-confident optimism that has prevailed among German financiers. Where all great financial operations seemed to succeed so easily, where the public was so ready to buy up with the utmost avidity all the industrial stocks that could be brought out, and where the great banks

themselves have expanded their capitals and their fields of operation in a way that the world has never seen before, the individual banker lost all sense of personal limitation; his counsel seemed, to him, wise and good everywhere, even in branches of business where he had no knowledge. Of course the natural result of this system has been to place the financiers sitting on the boards of companies almost wholly at the mercy of the managers, who controlled and knew the business details of the companies. How many cases have been uncovered in Germany during the past three months where the grossest irregularities had been practised by managing directors for years, and the overseers went on accepting mechanically the balance-sheets laid before them, and assuming, in their easy-going optimism, that all was well, and nothing could go wrong.

A good illustration of this state of things has been revealed in connection with some of the electrical companies. As is well known, all the great German electrical companies are operated in connection with a financing company, the former supplying machinery, equipments, and plants, and the latter raising the funds for operating the various railways, lighting plants, and other establishments, as well as exercising a controlling influence in whatever subordinate companies were organised for operating these. The tendency has naturally been to put the directors of the manufacturing electrical company also into the directorship of the financing company; and thus it has come about that the policy of the latter has been too often dictated, not by sound financial principles, not by a careful study of actual needs, where electrical railways and similar concerns were to be built, but by the demands of the directors of the manufacturing companies to make new work for the latter. In this way some electrical roads, built in localities where there is no adequate demand for them, have begun already to come to grief; and in several recent cases, where manufacturing electrical companies have either failed or experienced financial difficulties, the trouble was directly due to this artificial pressure to secure orders.

Germany is now going through a period of self-examination, as the result of the above conditions. The public Press is discussing measures of reform in the management of joint-stock companies. It has been proposed and argued with much force that boards of overseers should be abolished altogether, thus making the managing directors directly responsible to public opinion and the law, and giving them no opportunity to cloak their misdeeds under the authority of an inexperienced board of overseers. Another evil to be remedied—if boards of overseers are retained—is the presence of men in them, who are put there by reason of rank or title, for the purpose of giving the companies a certain artificial standing with superficial people. This evil has, perhaps, not gone so far here as in England, since the German aristocracy, till recently, has held more aloof from business undertakings than that of England; but the evil has gone far enough in Germany to cause the papers to call attention to it as one of the factors in bringing about recent disasters.

Correspondence.

RAILWAY REFORMS.

TO THE EDITOR OF THE ECONOMIST.

SIR,—In your issues for the last two weeks you have mentioned several very important railway reforms which you hoped to see carried out.

One very important reform which you did not lay stress upon, and which could be accomplished at once without increased expense, but with a great increase of comfort, might be called the punctuality reform.

It is a standing disgrace to our country that, in an age when time is money, and so many business or other engagements are hanging upon one another, a railway journey should almost invariably at this time of year mean an hour wasted for the traveller if he is starting from a station which is not the starting point of the train; an hour lost for all the passengers in the train, for all those all along the line who are waiting for friends or proposing to travel; an hour lost by every subsidiary train which must make its connection with the main line train; an hour lost by numbers of railway officials all along the line, and by many goods trains which are timed to wait for the express passing at certain fixed points on the line, thus dislocating the whole traffic of a day, only to be repeated by a similar experience on the morrow.

If time were absolutely kept what a saving there would be in expense, in temper, and in disappointment!

We used to be told that the delays and bad time keeping were caused by the inordinate quantity of luggage that passengers would carry about with them. It must be evident to every traveller that the quantity is now much reduced, and yet the proverbial half-hour late is almost always exceeded on long-distance trains, and the London Scottish Volunteers, who travelled from London to Aberdeen last Friday night, were actually four hours late in arriving at Aberdeen.

The Midland Railway, which used to be considered one of the best-equipped and up-to-date lines, has for several years run its trains very late indeed. If you ask a St Pancras man why the trains are so late, he will tell you that it is the North British, who never run to time; if you ask an Edinburgh inspector why the Midland trains are so invariably late in arriving, he answers that the Midland is always half-an-hour or more late at Carlisle.

In the matter of time-keeping the North-Western trains have a better record than the Midland.

Only last month a new service of accelerated trains was inaugurated by the Midland between London and the North, and while admitting that they had been remiss in time-keeping in the past, some of the articles announcing these new trains promised that scheduled time would now be kept.

I have been told, however, that never once have these fast trains arrived in Edinburgh up to time, but no public record of their unpunctuality is kept. As a frequent traveller, I can say that their ordinary train service is not one whit better than it used to be, but, if anything, worse. Eighty-eight minutes late and 112 minutes late were the telegraphed times for two main line Midland trains on Saturday night, and, as I write, a Midland express train passes my window 50 minutes late. But, it may be asked, how can this be put right? This question was answered long ago, in the coaching days, by the late John Croal, of Edinburgh, who told his drivers that the way to be punctual was to start in time, and keep up to time all along the road, and if that were done there would be no difficulty in arriving at the destination in time. There are not wanting instances even of trains being run to time. A good many comparisons have lately been made between railway results obtained in America and in Britain. One of the charms of travelling in America is that you can depend upon arriving at your destination at the contracted time.

In this country we have some trains on the North-Western, for instance, run under a penalty for being late, and these are scarcely ever behind time; it only requires sufficient pressure to be brought to bear upon the railway companies to insure their doing the same with all their trains.

If there were a penalty of £1 for every five minutes late, we should soon see an end of late trains, because if the railway companies found that they could not work up to their time-table, a change could be made next month in it, and thus they would at once bring their working and the time-table into harmony.

The punctuality reform would not cost the shareholders anything; would be the greatest possible comfort to passengers; be a great facility to the conduct of traffic; and add immensely to the safety of railway servants and the travelling public.—Yours truly,

August 8th. C. W.

NEW CAPITAL ISSUES.

India Rupee Loan.—The Secretary of State for India in Council gives notice that on July 13th the Government of India issued a notification inviting tenders for a loan of one hundred lakhs of rupees (Rs.1,00,00,000), bearing interest at the rate of 3½ per cent. per annum, and not liable to be discharged before December 31, 1920, with three months' previous notice. Tenders will be received in Calcutta until noon, and at Madras, Bombay, Allahabad, and Lahore, until the local time corresponding to noon Calcutta time, of the 14th inst. The minimum rate will not be declared beforehand. It will be recorded by the Comptroller-General before the tenders are opened, but will not be announced unless any are rejected as being below the minimum. The instalments will be payable on August 27th, September 24th, and October 16, 1901. Copies of the notification published by the Government of India can be obtained on application to the Financial Secretary, India Office, Whitehall, S.W.

MEETINGS, &c.

WHITE PASS AND YUKON RAILWAY COMPANY, LIMITED.

The annual general meeting of the shareholders in the White Pass and Yukon Railway Company, Limited, was held on the 9th instant at Winchester House, London, the Hon. Sidney Carr Glyn (the chairman) presiding.

The secretary (Mr W. H. P. Stevens) having read the notice convening the meeting, and also the report of the auditors,

The Chairman said: With the report and accounts have been circulated the report of the president and the report of the auditor of the local companies for the year ended December 31, 1900, which together give you full information as to the condition of both companies at that date. In the accounts of this company now submitted to you for adoption, the dividends declared by the three local companies have been brought into account, and the net profit, after bringing into account interest accrued on the local companies' bonds for the six months since the date of the closing of their books, and after deducting interest paid upon debenture stock and debentures of this company up to June 30th, is shown to be £261,057 17s 7d. After adding to this the amount brought forward from last year the total profit to be dealt with at this time amounts to £344,373 2s 10d. Out of this profit an interim cash dividend of 5 per cent. was paid on March 22nd last, and the balance has, as you were told in November last, been returned to the local companies to enable them to pay for the completion of the second portion of the railway, and for other capital expenditure in connection with the enterprise. The directors now propose that in respect of such profits so applied, a bonus distribution be made to the shareholders of the company at the rate of 25 per cent. upon the issued capital of the company, and a resolution to give effect to this proposal will be submitted to you presently. This will absorb £275,000 of the profits, and this amount will be transferred from profit and loss to capital account in respect of the bonus shares to be issued. In my speech in March last I went fully into this question of dividend, and I explained why we thought it desirable to pay the dividend in shares and not in cash, and I then said that we hoped to propose at this meeting that there should be a distribution of fully-paid shares to the amount of 30 per cent. Although the dividends declared by the local companies do not admit of our paying quite so much as 30 per cent., still no doubt the shareholders will not grumble at a dividend of 25 per cent.; and further there will undoubtedly be some other expenses to be met out of income from capital expenditure, and the remaining 5 per cent. can be distributed in shares in the same way, in addition to a cash dividend. The shareholders will have noticed that the amount shown in the profit and loss account for the year as dividend on the shares of the local companies as declared—£287,029 7s 5d—is a larger amount than the net income of the railway shown in Mr George Wilkinson's report on the earnings and operating expenses on the White Pass and Yukon route for the year ended December 31st last. This difference arises from the fact that one of the local companies has declared a special dividend in respect of profits realised since the date up to which the local companies' accounts were made up, but before the date upon which our company's accounts were made up. These profits will appear in the accounts of the local companies for the current year. In the meantime the correctness of the special dividend has been certified to the satisfaction of the directors by the auditor of the local companies, and it has also been passed by our auditor. These profits arise not from the actual operation of the railway, but from the sale of town-site and other properties. To turn to the present position and prospects of the company—though it is rather early in the year to deal with anything of this kind, but I will tell you all that we know—you will be interested to learn that up to the end of July the gross traffic receipts on the railway, as advised by mail and cable, have amounted to $1,182,277, or in round figures to £243,770, an increase of something more than £53,800 compared with the corresponding period of last year. The earnings for the month of July show a decrease of a little over $30,000 compared with the earnings of July last year; but this decrease is explained as being due to goods having been rushed through to Dawson immediately on the opening of navigation to such an extent as to have overstocked the Dawson market, and, as a consequence, shippers have been keeping back their further shipments until the market assumes a more favourable tone. We are advised that the prospects for business during the months of August and September are good. We have not received details of how these receipts were made up for a later date than the end of May, but it will be satisfactory to you to know that up to the end of May the amount of revenue freight carried over the railway was 10,077 tons, as against 6,346 tons for the corresponding period of last year, and during the same period the earnings from passenger traffic were £16,816, compared with £9,633 for last year. These figures all tend to show that the business is an increasing one, and that the prospects for the enterprise are satisfactory. With regard to the river transportation business, it is too early in the season to speak of how this may result. The agreement with the Canadian Development Company, which I mentioned in my speech to the shareholders on March 11th last, was carried through in its entirety, and the British Yukon Navigation Company—the local company formed to own and operate the fleet—became the owner of all the Canadian Development Company's property—ships, stores, docks, yards, warehouses, &c.—as on May 1st last. Some one or two other boats already operating on the river have also been purchased, and the British Yukon Navigation Company—that is our new local company—has now in operation a fleet of eighteen steamers on the Yukon River between White Horse and Dawson, besides two steamers engaged in the Atling trade between Carribou and Atling. With these steamers and the wharf and warehouse accommodation at the different points on the river, the railway is no longer dependent upon outside enterprise for the delivery of through freight to the consignees, and it is confidently anticipated that results will show that freight can be much more economically and expeditiously handled than heretofore, and that consequently collections will be more prompt. We may expect any moment now to hear that the Canadian Government telegraph line, which will connect Dawson with the outside world, has been completed. With regard to new discoveries, while new discoveries in placer mining are constantly being made and create considerable excitement, yet we all want to be assured that quartz mining will be one of the industries of the future. It is known for certain that large quartz veins exist both in the Taku district in Atling and in the Klondike, and we are assured that these prospects look very promising; but until the owners have time to tunnel into the property and prove them up, we do not like to proclaim that the success of the quartz mining in the Yukon is finally assured. If the reports we have received can be believed, there exists in each of these districts quartz ledges that will be the wonder of the world, and the quartz development in the Yukon will rival, if not surpass, the famous reefs in South Africa. It takes time to develop these enterprises, and we have yet to hear what is to be done with the enormous deposits of copper near White Horse. Last year we were informed that these properties were all in a state of negotiation, and that the owners were asking very large sums of money for them, but that they lacked the necessary means for properly developing the mines, and for showing what they contain. This year all we know is that important copper syndicates have sent their experts to report upon, and, if they so advise, negotiate these properties; but we have not yet had time to hear what is being done with them. A most important dis-

covery affecting our enterprise is that of coal near White Horse. Several large seams have been found, and enough was got out with which to experiment on our railway, on trains running from White Horse to Carribou. The result has been pronounced quite satisfactory by the engineers in charge of the trains; but in the case of coal, as with copper, it will take some time to develop these properties, and we must not expect results in too much of a hurry. There has been no definite information up to the present time as to the gold output in the Klondike, but all indications equal at least, if they do not surpass, those of last year. There has been an unfortunate delay in the matter of obtaining an official quotation from the Stock Exchange for our 5 per cent. consolidated debenture stock, but everything is at last complete, and I understand that our application is before the Stock Exchange Committee for consideration to-day. The delay has been due to the fact that one of the local companies' mortgages, which under the terms of the trust deeds was required to be deposited with the trustees as security for the debenture stock issue, was held over for many weeks by the registrar of mortgages at Sitka, the capital of Alaska. It must be satisfactory to feel that every precaution has been taken to make the debenture stock a specific first charge upon the railway. I have little more to say to you. I am satisfied that our company's business is in a very satisfactory condition, and I think it is a matter for congratulation that the men who had the pluck and sagacity to put their money and energy into what was, at its inception, so hazardous a speculation, are now beginning to see the reward of their enterprise. In a business such as this, when operations are carried on under such abnormal conditions of climate, it is, of course, natural that the expenditure on maintenance of the permanent way and of rolling stock should be heavy, and it is also essential to the lasting success of the enterprise that everything should be kept up in the highest state of efficiency. A considerable amount of the earnings must, in the absence of a large working capital, be applied every year to keeping up the present high level of efficiency, but I think I should not be wide of the mark if I hold out to the shareholders a hope of receiving an interim cash dividend in the autumn of something in the neighbourhood of 10 per cent. I now beg to move: "That the report and accounts submitted to the meeting and taken as read be received and adopted."

Mr Joseph Price seconded the resolution, which was carried unanimously.

The Chairman, in moving: "That a dividend of £2 10s per share be, and the same is hereby, declared, and that such dividend be paid, free of income-tax, and that such dividend be satisfied by the distribution amongst the members as nearly as may be in proportion to their respective holdings of fully paid-up shares in the capital of the company, to be treated as of par value, said: We hope to pay the dividend almost immediately. There was some little difficulty regarding the fractions, but these have been arranged, and will be paid in the office of the company.

Mr Price seconded the resolution, which was agreed to.

The Chairman said it was with great pleasure that he proposed the re-election of Sir Allen Sarle and Mr Joseph Price as directors of the company. He had to apologise for Sir Allen Sarle's absence on that occasion, but he had made arrangements some time ago to go away, and he could not alter those arrangements so as to be present. He considered the company was fortunate in having these two gentlemen on the board. Sir Allen Sarle was, as they all knew, an expert in English railways, and Mr Price was equally an expert in American railways. It was a great pleasure to the other directors to be associated with these gentlemen, and he was sure it was an advantage to the shareholders that they should be upon the board.

Mr Lambert seconded the resolution, which was carried unanimously.

Mr Price thanked the shareholders for his re-election, and stated that his best efforts should be directed to promoting the interests of the company.

The auditors, Messrs Woodthorpe, Bevan, and Co., having been reappointed,

A vote of thanks to the chairman for presiding terminated the proceedings.

EUROPEAN PETROLEUM COMPANY, LIMITED.

The annual general meeting of the shareholders in the European Petroleum Company, Limited, was held on the 9th inst., at Winchester House, London, Mr H. Pike Pease, M.P. (the chairman), presiding.

The secretary (Mr John Clarke) having read the notice convening the meeting,

The Chairman, after referring with regret to the death of Mr Arthur Laing, said: I think I am justified in saying that the result of our work in the last year is altogether a very satisfactory one, considering the great drop which has taken place in the price of petroleum. You will see from the report that the gross profit has amounted to £142,916, the interest on debentures is £30,795, and the depreciation account, which, according to the provisions of the trust deed, has been used to purchase debentures, has taken up £30,807. The reason why that amount is less than the amount of the debentures is because the debentures were bought at a less price than par. And your directors have thought it wise to place to the wells renewal account £10,000, which makes a total depreciation of £40,807. From this total sum should be deducted the dividend on preference shares at the rate of 7½ per cent., paid on January 1, 1901, £16,341, and in July, 1901, £19,639. That leaves available for distribution £35,331, and the directors propose to write off the expense of the debenture issue, amounting to £3,636, and to pay a dividend of 5 per cent. on the ordinary shares, absorbing £27,500, leaving a balance of £4,194 to be carried forward. One satisfactory point in regard to our showing is that the amount of production during the year was considerably more than was foreshadowed in the prospectus, that amount being the average quantity produced in the two previous years. I am glad also to say that we have started the new year well, and that the production of the twelve weeks has been 65,869 tons, a very large increase of production over the corresponding period of last year. We have every reason to believe that there will be a very considerable increase in the production during this half-year, and a considerable further increase in the six months following the end of the year. I should like to say that some of the directors have visited all the properties belonging to the company. Mr McMullen, Colonel English, Mr Fox, and Mr Fowler have been abroad for some time, and have visited Baku, Galicia, Roumania, and Hora. I should like to say at the same time we have appointed as manager at Baku Mr Sallis, a man of great administrative power. I regret to say we have not been quite as fortunate as we could have wished with our ships, this being caused to considerable extent by misfortune. The s.s. Prudentia was laid up at Singapore, the Vedra broke her tail-end shaft, and the Bakuin ran over the wreck of a Chilian ship at Callao, but, taking the results as a whole, I consider the results, so far as Baku is concerned—which is the mainstay of our dividend-earning capacity—are very satisfactory. We are extending as far as possible our boring operations there. At the present time we are boring ten new wells. We have not had many fountains; but we have had one fountain which has considerably increased the amount of our produce in that district; and your directors are taking energetic measures to obtain grants from the Russian Government. On the whole, we are well pleased with the results of our efforts. The present price of crude oil at Baku is 7½ kopecs, or less than 10s per gallon, whereas the price in Germany is 25s per ton, and in America about 26s. It is obvious that the price at Baku is abnormally low, and I personally think it will increase in the next few months, although I cannot hold out any hope, from my own point of view, that the price is likely to rise to the abnormally high price at which it was last year. The explanation of the fall is that the transport facilities from Baku to Batoum on the Black Sea are insufficient. The oil produced at Baku is sent to Russia by way of the Caspian and the Volga. For any other country it has to go 600 miles overland, with the result that five-sixths of the Baku production goes to Russia, and this, when trade is depressed as it is now, is too much. Manufacturing firms in Russia are largely dependent on Government orders. When the Russian exchequer is well supplied orders are plentiful, but for some time they have been painfully scarce. I may say that as far as the use of petroleum in Russia is concerned, I believe it will be more extensively used in the future than in the past. I understand our Admiralty are making considerable experiments with regard to the use of petroleum on board ship, men-of-war and other ships and destroyers, and I believe also a great many experiments have been made by the German, Italian, and American Governments. The German Government are already using petroleum in addition to coal, and in some cases are using it alone on warships. I think questions may be asked as to the Batoum storeage. The directors have not endeavoured to make an export trade, because they would have to compete with the Consolidated and the Anglo-American companies, and we have considered it wise to let the Batoum storeage for £2,200 per annum, which we consider a satisfactory amount. There is not much for me to say with regard to the other properties of the company, except a few words as to the concession of the Grand Vizier at Hora, where we have reason to believe there will be great possibilities in the future. We have the right to bore for oil at Hora on the East of the Marmora, and, having put down some bore-holes, have felt justified in putting down one of large diameter. Next year I hope to be able to tell you something more definite with regard to this. In conclusion, the Chairman moved the adoption of the report and accounts.

Mr Barwick seconded the motion, which was carried, and resolutions were also passed approving the special accounts prepared for the Russian Government, and also the dividends recommended.

The auditors, Messrs Price, Waterhouse, and Co., having been reappointed,

A vote of thanks to the chairman for presiding terminated the proceedings.

MAISON VIROT, LIMITED.

The annual general meeting of the shareholders in Maison Virot Limited, was held on the 6th inst. at the Institute of Chartered Accountants, Moorgate place, London, Mr James Jackson (the chairman) presiding.

The secretary (Mr Thomas Nevell) having read the notice convening the meeting,

The Chairman said:—Comparing the figures before you with those of last year, the first entry on the debtor side of the balance-sheet—namely, the amount of our capital—stands at the same as before. Creditors are £960 less. Unclaimed dividends are £7 lower than they were. The amount due to Messrs Meyer and Co. has risen by £554. This, you will remember, constitutes the debts of the old firm that we are collecting and paying to the old proprietors. The reserve account has been increased by the £305 that was carried to it last year. The profit on trading is £1,309 less than last year; but, on the other hand, the charges are £1,103 less, leaving a difference of £207 in the total net profit, which is now £10,937, as against £11,144 in 1900. On the credit side, we find the first item—goodwill, fixtures, &c.—at the old figure of £192,120. The stock-in-trade still stands at the slight figure at which we usually have it, and considering the fact that our purchases of material do throughout the year aggregate quite a substantial sum, it is miraculous that our stocks should continue

to stand at so low a figure. The explanation, as I have stated before, lies in the fact that our stock is turned over so rapidly. The complete change of the whole of the stock is reckoned rather by hours than by days. Nothing is kept long enough to get old, and only the newest materials and the latest designs are to be found on the premises of an establishment which has earned the reputation, not of following, but of leading the fashion of the world. Debtors stand at £1,633 18s 4d lower than last year, which is a satisfactory feature, while cash at bankers and in hand is £3,384 more. This is largely accounted for by the fact of no interim dividend having been paid, which amounted to £2,030 last year. Bills receivable are £74 higher, while preliminary expenses are £52 15s 3d lower—the amount that we wrote off them last year. Rent, &c., paid in advance is the same, and the dividend on the preference shares is £70 lower, owing to the increased income-tax. On the debtor side of the profit and loss account, the expenses in London, including salaries of secretary and clerks, law costs, &c., are £194 12s 2d lower than last year, and now stand at what I think you will admit to be a very reasonable figure—£626—considering that the item includes £75 loss on exchange, the whole cost of rent of offices, clerks, and so on. The next entry bears a different form, both in the heading and in the amount, to what it did last year. Then it figured as directors' and auditors' fees, £1,157 10s, whereas this year it figures as auditors' fees, £157 10s. The directors have decided to give up their fees for this year entirely. The balance to be appropriated is set out, together with the different dividends, which are less than last year by the amount of income-tax only. When we met last August it seemed possible, and indeed seemed probable, that the Exhibition might be kept open for some months longer than was originally intended, but, unfortunately for us, no such extension of time took place, and during three-fourths of the year our business was carried on under ordinary conditions. During the year several of the members of the board have visited Paris and seen the working of the business there, and with a view to being more constantly and more directly represented in Paris, we have elected Mr Julien Kinsbourg to a seat on the board. In conclusion, the Chairman formally moved the adoption of the report and accounts.

Sir W. Treloar seconded the motion, which was duly carried.

The retiring directors, Mr James Jackson and Sir William Treloar, having been re-elected, and the auditors, Messrs Chatteris, Nichols and Co., re-appointed,

A vote of thanks to the chairman and directors terminated the proceedings.

GOLD FINANCE COMPANY, LIMITED.

The annual general meeting of the shareholders in the Gold Finance Company, Limited, was held on the 7th inst. at the Cannon street Hotel, London, Mr W. P. Forbes (the chairman) presiding.

The secretary (Mr H. Milner Willis) having read the notice convening the meeting, and also the report of the auditors,

The Chairman said that although the year had not been propitious, the shareholders of this company might reasonably congratulate themselves upon the fact that they had been able to make a substantial profit, and to recommend the payment of a dividend of 15 per cent. This profit, too, had been made in money; it was available, and could be distributed without interfering in any way with the usefulness of the company. This profit was the result of the utmost care and watchfulness on the part of the board. The time of great promotions and easy raising of money had gone for the present, and it was by the old-fashioned way of looking after small things that such a result could be achieved. Referring to the accounts, he said that the sundry debtors were all good, and most of them had paid since the accounts were made up. The shares and other investments stood at £29,165, and included a very large holding in the Cosmopolitan Proprietary, Limited. The board had been asked what their holding was in that company, but, as a matter of policy, they had not given the desired information. He hoped the shareholders would support the directors in not giving exact information as to the stocks and shares held by the company. It would be of no advantage to them, and it was only after careful consideration they had arrived at that decision. He would say, however, that the holding in the Cosmopolitan Proprietary alone would pay back the entire capital of the company at market price. He hoped the shareholders would accept that statement and let the matter stand there. He believed that the Cosmopolitan Proprietary would be a steadily rising mine, and not a Stock Exchange movement. The directors were very proud of the Cosmopolitan Proprietary, and wished to see it one of the premier mines of the world. The interest in mining leases, &c., included a large holding in Hannan's Hidden Treasure and other assets. The expenditure in connection with new enterprises included the acquisition of a large interest in the Champion Proprietary, Limited. Payments had also been made on account of the contract for the erection of the 50-stamp battery on the Cosmopolitan Proprietary. On the completion of this contract a further block of fully-paid shares in that mine would be due to the company. They had further acquired other mining leases in the Niagara district of Western Australia, which were turning out extremely well. The company had only £937 invested in land, an item which yielded 30 per cent. upon the outlay. The report gave full details as to the Champion Proprietary and the Cosmopolitan Proprietary. The Cosmopolitan gave no surface show, but was a magnificent mine. It would be equipped in every possible way, and would have one of the finest batteries on the field with 50 head of stamps. These, he believed, would be at work in October, when the mine would tell its own tale by the gold won and dividends paid. This company, as large holders of the Cosmopolitan shares, would then naturally derive advantage by the increased value of the shares and the dividends paid upon them. The board had been blamed for putting too conservative an estimate upon the assets, but if any fault had been committed it had been in the interests of the shareholders, it being considered safer to undervalue rather than to present a balance-sheet with inflated values, which might be misleading. In conclusion, he moved the adoption of the report and accounts.

Mr R. J. Hoffmann seconded the motion, which was, after some discussion, adopted.

The retiring directors, Messrs Hoffmann and Herbert Moir, having been re-elected, and the auditors, Messrs Cash, Stone and Co., reappointed,

A vote of thanks to the Chairman, directors, and staff terminated the proceedings.

* New 2¾ per Cents.—Goschens.

The amount of the "other deposits" compared with the "other securities," showed in 1891 an excess of £6,596,217 and in 1898 an excess of £12,439,046, in 1899 an excess of £9,217,186, and in 1900 an excess of £9,146,534. In 1901 there is an excess of £14,254,708.

At the corresponding period in 1898 the Bank rate was 2½ per cent., and the position in the money market was easy, the rate for best three months' bills having declined a fraction on the week, to 1⅞ per cent., while loans for short periods could be had at ½ per cent., or even lower. On the Stock Exchange Home Rails were flat, the final dividends being disappointing. Americans showed strength, peace between the United States and Spain being practically assured. Silver advanced from 27⅛d to 27 5/16d per ounce during the week.

In the same week of 1899 the Bank rate was kept at 3½ per cent., though there had been some expectation of an advance. A sum of £948,000 in gold was received from abroad, which decided the directors of the Bank to make no change in the official rate. The market was in a cautious mood, the outside rate for best three months' bills being higher than the Bank rate, at 3⅝ to 3 7/16 per cent. The holiday caused a quiet time on the Stock Exchange, and prices were flat.

In 1900 at this time the Bank rate was 4 per cent., and owing to the heavy Government borrowing, the market was in such a state of uncertainty that outside rates were kept higher than the official minimum, best three months' bills being quoted 4½ per cent. The Bank directors raised their price for gold coin, and took other measures to attract supplies of the metal.

The following figures from the official returns show the amount of bills and cheques cleared at the Bankers' Clearing-house. Special days are given separately, together with the total increase or decrease to date in each case:—

(000's omitted.)

Excess of actual reserve	4,435,000	4,625,000	5,830,000	+ 190,000	— 1,395,000

In the above tables the Reichsmark is converted at 1s; the Austrian crown at 10d; the Dutch florin at 1s 8d; and the franc, lira, and peseta at 25 per £1, American currency is reduced into English money at 4s per dollar.

Discount and Loan Market.—Except for a little pressure on Thursday, when the instalment on Consols was paid, money has been in plentiful supply, and loans have been obtainable at about 1½ per cent. Practically no change has occurred in general conditions, and the discount rate for best three months' bills is no better than 2 7/16 per cent. The Bank return shows merely the changes due to the holiday demands for currency, the gold stock being £782,908 lower, at £36,530,113. As £179,000 was received from abroad, this indicates an expansion of about £962,000 in the home circulation. The note circulation, however, shows a reduction of £113,450, so that the net loss to the reserve amounted to £669,458. It now stands at £23,671,573, and the proportion of reserve to liabilities is 2¾ higher than last week, at 49½ per cent. The advance in the proportion is due to a reduction in the Deposits, the Public and Private Deposits being £1,636,793 and £3,465,519 lower respectively. The market has reduced its indebtedness to the Bank, the Other Securities being £3,759,827 lower than last week.

The subjoined table shows the rates quoted from day to day during the week:—

* These rates range from those current on the very best paper to those paid on bills for which the Bank rate is usually required.

The silver market has been lifeless, but in the absence of sales from America the price has kept steady, having been unchanged throughout the week at 26 1/16d per ounce for both spot and two months forward delivery.

The following is from Messrs Pixley and Abell's Circular dated August 8th:—

Gold.—Bar gold, fine, 77s 9½d per oz standard; United States gold coin, 76s 4d per oz; German gold coin, 76s 5d per oz; French gold coin, 76s 5d per oz; Japanese yen, 75s 4d per oz.

Silver.—Bar silver, fine, 26 15/16d per oz standard; bar silver, two months' delivery, 26 15/16d per oz standard; bar silver, containing 5 grs gold, 27 7/16d per oz standard; bar silver, containing 4 grs gold, 27 1/16d per oz standard; bar silver, containing 3 grs gold, 27 1/16d per oz standard; cake silver, 29 1/16d per oz.; Mexican dollars, nominal. Quicksilver, £9—3 per cent. discount.

The India Council on Wednesday offered for tender Rs.2,000,000 in remittances on India. The tenders amounted to Rs.15,030,000 at 1s 3 29/32d. The following statement gives the result of the sales from the beginning of the current financial year:—

	Rs.		£
April 1, 1900, to March 31, 1901	202,245,693	....	13,453,737
April 1, 1901, to July 31, 1901	69,023,555	....	4,578,205
Week ending August 7th.....	1,040,000	....	68,934
	70,063,555	....	4,647,139

Allotments since last Friday:—

	Rs.	
Wednesday	1,575,000 in bills on Calcutta	At 1s 3 29-32d, about 13 per cent., above in full.
"	267,000 in bills on Bombay	
"	160,000 in bills on Madras	
"	40,000 in bills on Bombay	At 1s 3 31/32d.
"	38,739 in bills on Madras	

Next week Rs.2,000,000 will be offered.

The foreign movements of gold to and from the Bank since last week have been as follow:—

ARRIVALS.	£	WITHDRAWALS.	£

THE STOCK MARKETS.

With the "House" closed on Saturday and Monday, and the holiday season in full swing, there is but little to place on record respecting the week's business. In such circumstances prices naturally tend to go lower, even in more favourable conditions than the present, and it is not surprising, therefore, that there is an almost general loss of market value as compared with last week. Consols and gilt-edged securities constitute one of the exceptions, as, with a period of speculative inactivity in prospect, it is natural to put surplus funds where they will be safe. Foreign stocks show weakness as a rule, South Americans again showing pronounced depression. The week has brought out the last of the Home Railway dividend announcements, but there is not much change in the condition of the market except special weakness in Great Northern "B" stock. Americans are decidedly flat, as it is now reported that the steel strike is to be fought out to the bitter end. Canadians have kept fairly strong. A rather better inquiry has existed for good Industrials, but mining shares are flat generally, and the slump in West Africans has made further progress.

Home and Colonial Government Securities.—Consols have shown some firmness, in consequence of the continued ease in the money market, and there is a further improvement in the quotation. Two and a-Half per Cents. have also moved up, and Indian issues are about ½ higher all round. Colonial stocks keep steady, but the only variation in price is a gain of a point in South Australian of 1917-24. A better tone prevails for British Municipal stocks, in sympathy with Consols. Metropolitan Three and a-Half and London County Two and a-Half have each risen a point, and a similar advance has occurred in the price of Swansea Three and a-Half per cent. stock.

* Two weeks.

Foreign Government Securities.—The bourses have been dull and spiritless, but the changes in price are not all in one direction. Austrian Gold Rentes, German Consols, and Italian Rentes have moved up, and an improvement has occurred in several of the less prominent issues, such as Servian bonds, Swedish, Norwegian, and Dutch. Spanish showed weakness earlier, but has recovered, and the price is now slightly higher than a week ago. Declines have occurred in Greeks, Turkish Groups, and several of the Chinese loans. Mexicans are the turn better, but South Americans generally are out of favour. The Brazilian exchange has again declined and taken the Government stocks with it, and Argentines have lost ground generally. Chilians and Uruguays are fairly steady, but Venezuela bonds have dropped 2 points, on the suspension of the remittances for the service of the debt.

The following are the latest closing prices, &c., of some of the leading stocks :—

British Railways.—The tale of disaster for the June half-year is now complete, the Great Western dividend having been announced at the rate of 2¼ per cent. on Thursday. In that particular case the reduction had been fully discounted, and there is practically no change in the price of the stock as compared with last week. North-Western has also been little affected by the issue of the report, but Midland Deferred has fallen 1½. The weak spot of the market has been Great Northern "B," the price of which is 6 points lower than last week. On the other hand, Metropolitan is very strong, the board having evinced their anxiety to settle the electrification question by offering to refer to arbitration at once, instead of waiting the month prescribed by the Board of Trade. Central London Preferred Ordinary has further risen 2 points, while declines are marked in Hull and Barnsley and Great Central Preferred Ordinary; South-Western Ordinary and Deferred have each lost 2 points, but the stocks of the other passenger lines are steady, the Bank Holiday "takes" promising very well. The dividends on the Scotch railways are now being anticipated with some anxiety, and, in consequence of the bad results on this side of the border, the stocks have all been put lower. Barry Ordinary has recovered 5 points of the recent decline.

The traffic returns of eighteen principal English and Irish lines, as given in the accompanying table, show an increase of

£36,788, equal to 1·8 per cent. for the week, as compared with the corresponding week last year, and the three principal Scotch lines show an increase of £11,402, equal to 5·1 per cent. For the current half-year the English and Irish lines exhibit a decrease of £92,913, or 1·1 per cent., while on the Scotch lines there is a gain of £11,402, equal to 5·1 per cent. The latter are calculated from August 1st instead of from July 1st, as in the case of the English and Irish companies.

Subjoined are the latest closing prices of the more important issues as compared with last week's prices. The making-up prices at the last settlement are also given for reference purposes:—

American Railways.—The strike of the steelworkers has assumed a more serious aspect this week, the attempts at compromise having been abandoned, and the men's leaders are endeavouring to get all the men out they possibly can. The damage to the maize crop, though reports as to its extent differ widely, is known to be serious, and these two influences have greatly depressed the market for railroad securities. The heaviest falls are in the Preferred stocks of the Union Pacific and Norfolk and Western roads, the Common stocks showing smaller declines. Southern Pacific and Chesapeake and Ohio also show substantial losses; while smaller declines have occurred in Atchison Preferred, Erie issues, Louisville and Nashville, Norfolk and Western, and Readings'. A heavy fall is marked in Mexican Central stock. Bond issues show firmness, advances of 3 points having occurred in Lehigh Valley Terminals, and 2 each in Mobile and Birmingham, Muskegon Grand Rapids and Indiana, and Rio Grande Junction bonds.

The following are the latest closing prices, &c., of the most prominent issues:—

Colonial and Foreign Railways.—The prospects of the crops in the Dominion are of the most favourable character, and are of additional importance in consequence of the probable shortage in the United States and most European countries. The stocks of the Canadian railways have consequently resisted the depression prevailing in the American market, both Canadian Pacific and Grand Trunk First Preferences showing an improvement on the week. Indian railway stocks have been moderately active; there is a rise of a point in Indian Midland, while Assam-Bengal stock has fallen 2, and Bombay-Baroda 1. As regards Foreign railways, a feature is a rise of 7 in Grand Russian Nicolai bonds. South Americans are dull in sympathy with Government stocks. Central Argentine and Buenos Ayres and Rosario are each a point lower, and small declines have occurred in Great Southern Preference and Cordoba Central Income debenture stocks. Hardly any variation has taken place in Brazilian railways, but Uruguay Central issues have declined; Inter-Oceanic Preferred shares and the Prior Lien debentures show an improvement, and Mexican First Preference has gained a point on balance.

The following shows the net movement on the week in some of the principal issues:—

	Closing Prices. Last Week.		Closing Prices. To-day.		Rise or Fall.		"Making-up" Prices. July 29	"Making-up" Prices. July 15

Mines.—Except as regards West Africans, the movements in prices of mining shares have been small, and for the most part towards lower quotations. In the "jungle" department the set-back has been more pronounced, and, in spite of a slight recovery towards the finish, the leading shares show considerable losses on the week. Banket Reefs and Ashanti Goldfields have dropped a full point each, while Gold Coast Amalgamated, though closing above the worst, is down to the extent of 1 15/16. There are smaller losses in Claude's Ashanti, Fanti Consols, Wassau, and Wassau Extended, while Adulessa, exceptionally, shows an improvement. Westralians show about an equal number of declines and advances. The shedding of directors by the Ivanhoe has not adversely affected the shares, which show no change on balance. There is a slight improvement in Kalgurli, Great Boulder Main Reef, Sons of Gwalia, and Westralia Mount Morgans, while Golden Horseshoes have dropped ¼, and there are small declines in Hannan's Oroya, Great Boulder Perseverance, and Lake View. Mount Morgan (Queensland) has recovered 1/16, to 4¼. Not much has been doing in South Africans. Deep Levels show some weakness; Rand Mines are only a small fraction lower, but there are declines in Ferreira Deep, Glen Deep, and Knight's Central. In mining outcrops, Main Reef, Bantjes, and Roodepoort United are the turn better, while there are small losses in Bonanza, Modderfontein, Wemmer, Jubilee, and Simmer and Jack. Land shares are flat, Consolidated Goldfields, Gold Trusts, and Geduld each being a fraction lower. Chartered are 1/16 down, at 3 1/16, the only other change in Rhodesians being a loss of ¼ in Rice-Hamilton. Indian Gold shares are steady, while Waihi is again a fraction down. Copper shares have been distinctly weak. Rio Tinto are about a point lower than last week, and declines are marked in Anaconda and Copiapo.

The following are the prices and variations of the more active shares:—

Miscellaneous.—A fair number of dealings have passed in Bank shares, but the only variations are declines of ½ each in London and Westminster and Union of London, and a rise of the same extent in Metropolitan of England and Wales. Allsopps Preferred Ordinary is a point higher, Guinness stock has risen 20 on the increased bonus, and there are small advances in Bristol Brewery Preference, City

of London, and Lion Brewery, while Watney, Combe, Reid, and Co. Deferred has fallen 4. Vickers, Sons, and Maxim are a fraction lower, while John Brown Preference and South Hetton Coal have moved up. United States Steel stocks have each declined 1½. Westminster Electric shares show an improvement, while Welsbach Ordinary is ½ down, at 16½. Among Miscellaneous shares advances are marked in London Pavilion, Farmer and Co., J. and P. Coats, A B C, and Apollinaris and Johannis, while Baku Petroleum, Imperial Russian Cotton and Jute, Sanitas, and Robert Stephenson debentures have declined.

Notices and Reports.

GOVERNMENT STOCKS, ETC.

VENEZUELA EXTERNAL DEBT, 1881.—The Council of Foreign Bondholders have received from Messrs H. L. Boulton and Co., the agents of the bondholders at Caracas, telegraphic advices stating that the monthly payments for the service of the above Debt have been suspended, but that the Government intend shortly to resume the remittances.

RAILWAY COMPANIES.

BARRY.—The report for the half-year to June 30th states that the amount expended during the half-year on capital account was £96,057. The sum available for distribution, after providing for interest on preference stock, is £54,265. The directors recommend that a dividend of 7 per cent. per annum be declared on the ordinary stock, absorbing £52,922, leaving a balance of £1,343 to be carried forward.

BRITISH COLUMBIA ELECTRIC.—The report for the year to March 31st last states that the gross receipts for the year were $496,796, showing an increase over the preceding year of $46,174; the working expenses were $297,565, an increase of $43,445; the net earnings being $199,231, or $2,729 in excess of last year. The net profit for the year, after deducting London office expenditure, was $37,553, including £132 brought forward. After meeting debenture interest and the interim dividends, the sum of £19,103 was available for distribution and reserves. The directors have decided to write £1,218 off preliminary expenses, to recommend a final dividend on the ordinary shares of 2 per cent., making 4 per cent. for the year, and to transfer £5,000 to capital amortisation account, and £5,000 to reserve for depreciation, carrying forward £64.

CAMBRIAN.—The report for the half-year ended June 30th shows that the receipts were £146,308, against £142,090 a year before, and the expenditure £100,852, against £92,014. Warrants for the interest on A, B, and C debenture stocks will be posted to the proprietors on the 31st inst.

CENTRAL LONDON.—The report for the half-year ended June 30 states that the amount expended on capital account was £22,575. The revenue receipts from all sources amounted to £164,823, and the working expenses to £90,266, being 54·77 per cent. of the receipts, leaving a balance of £74,557. Including the balance of £3,527 brought forward from last half-year, the net revenue account shows a total of £79,496, and after providing for interest on the debenture stock, there remains an available balance of £65,532. The directors recommend that out of this sum an interim dividend of 4 per cent. per annum be declared on the undivided ordinary stock and preferred ordinary stock.

DUBLIN, WICKLOW, AND WEXFORD.—The report for the past half-year shows that gross receipts fell away by £3,757, mostly under the head of passengers. After meeting debenture interest and transferring £4,000 to locomotive and rolling stock renewal reserve account, against which there was no corresponding entry last year, a balance of £6,264 remains, as against £6,000 a year ago, which will suffice to pay the dividend on the first preference stock, and carry £264 forward.

FESTINIOG.—The report for the half-year ended June 30th states that the receipts amounted to £7,480, as compared with £8,472 for the corresponding period in 1900. The expenditure was £5,298, against £5,673, and the net earnings £2,182, as compared with £2,799. The directors recommend a dividend for the half-year at the rate of 2 per cent. per annum upon the ordinary stock, leaving £114 to be carried forward.

FURNESS.—The directors have agreed to declare a dividend of 2 per cent., carrying forward £1,594, against 3½ per cent. for the corresponding half-year, carrying forward £7,918.

GRAND TRUNK.—It is announced that, subject to audit, the results of the accounts for the half-year to June 30, 1901, are as follows:—

		£
Gross receipts		2,288,000
Working expenses, including special appropriation of £10,000 to bridge renewal account		1,545,000
Net receipts		743,000
Net revenue charges for the half-year, less credits		524,500
		218,500
Deduct—		
Amounts payable by the company under traffic and other agreements—		
Grand Trunk Western Company	£6,300	
Detroit, Grand Haven and Milwaukee Co.	18,200	
		24,500
Surplus for the half-year		194,000

This surplus of £194,000, added to the balance of £2,500 from December, 1900, makes a total amount of £196,500 available for dividend, which will admit of the payment of the full dividends for the half-year on the four per cent. guaranteed stock, and the five per cent. first preference stock, leaving a balance of about £6,700 to be carried forward.

GREAT NORTHERN (IRELAND).—The report of the directors for the half-year ended June 30th states that the traffic receipts, rents, &c., were £424,206 against £426,686, and the working expenses £237,658 against £238,092. The sum available for dividend is £175,157, against £175,889 and the directors recommend that a dividend at the rate of 6¼ per cent. per annum be paid on the ordinary stock, which, after placing £4,000 to the reserve fund, will leave a balance of £35,263 to be carried to next account.

GREAT SOUTHERN AND WESTERN (IRELAND).—The directors recommend a dividend for the past half-year at the rate of 5 per cent., leaving a balance of £1,026 to be carried forward. A year ago the dividend was at the rate of 5 per cent., and a sum of £17,515 was carried forward. The published receipts of the company for the half-year showed an increase of £140,000, very largely the result, apparently, of the recent absorption of the Waterford and Central Ireland and the Waterford and Limerick Railways.

GREAT WESTERN.—The following summary of the half-year's accounts compares the results with the corresponding half of 1900:—

	First Half-year 1901. £		First Half-year 1900. £		Inc. or Dec. in 1901. £
Gross traffic receipts	5,334,889	..	5,267,534	..	+ 67,355
Working expenses	3,569,153	(66·9%)	3,336,452	(63·3%)	+ 232,701
Net revenue	1,765,736	..	1,931,082	..	— 165,346
Add bal. brought for.	45,142	..	45,190	..	— 48
Add miscel. receipts	23,153	..	20,571	..	+ 2,582
	1,834,031	..	1,996,843	..	— 162,812
Less deb. and pref. interest, &c.	1,496,347	..	1,486,376	..	+ 9,971
Available for ord. div.	337,684	..	510,467	..	— 172,783
Div. on ord. stock	317,954	(2¼%)	477,427	(3½%)	— 159,473
	19,730	..	33,040	..	— 13,310

The directors state that the result of the half-year's working as compared with the corresponding period of 1900 shows a considerable increase in the receipts from passenger traffic, but a diminution in mineral traffic. The working expenses have largely increased in consequence, mainly, of the high price paid for coal under the contracts which expired at the end of the half-year. The contracts recently made, however, show a large reduction in price. Of the more important works which the company have in hand, the South Wales and Bristol Direct Railway, the Acton and Northolt Line, the Truro and Newquay Railway, the Roath Branch and the Bristol Harbour Lines have been well advanced during the half-year. The Wrington Vale Light Railway, the East Usk Railway Extension and the Rhos Lines, near Wrexham, are approaching completion.

HULL, BARNSLEY, AND WEST RIDING JUNCTION.—The accounts for the half-year ending June 30, 1901, after payment of the fixed and other charges, show an available balance (including £9,147, being the amount of £14,147 brought forward from the previous half-year, less £5,000 transferred to the engine repairs and renewal account) of £26,779. The contingent additional interest on

BANK STATEMENTS.

6

the second debenture stock for the half-year at the rate of 1 per cent. per annum, amounting to £10,000, was duly paid on July 1st, leaving a balance of £16,779 to be carried forward to the next half-year. The full dividend chargeable to revenue for the half-year on the 3½ per cent. preference stock has been earned, but the distribution will not be made until the accounts for the whole year are before the proprietors.

LONDON AND NORTH-WESTERN.—The following is a summary of the accounts for the half-year ended June 30th last:—

	First Half of 1901.		First Half of 1900.		Inc. or Dec. in 1901.
	£		£		£
Gross traffic receipts	6,547,856	..	6,619,385	..	— 71,529

Carried forward....	32,918	..	72,329	..	— 39,411

The directors observe that of the Bills submitted to the proprietors at the special general meeting on February 19th last, the one promoted by the company was rejected on second reading by the House of Commons. "The opposition was based upon a question relating to the rehousing of the working classes, which was not in any way the subject of, or affected by, the Bill. In these circumstances it was ruled by the Speaker that it would be out of order to discuss the facts, and your directors venture to think that the Bill, which would have enabled the company to provide additional accommodation in the public interest (including a new dock at Garston), was rejected under a misapprehension. The other companies' Bills have received the Royal assent." Messrs. Pickford and Co., who had for very many years acted as carting agents to the company at certain stations for merchandise traffic, having terminated their agreement with the company on June 30th last, the business has since that date been conducted wholly by the company's own staff and horses. It is confidently expected that increased efficiency and economy will result. Votes of the proprietors are requested for additional land and works to the amount of £121,256.

MARYPORT AND CARLISLE.—The directors have decided to recommend a dividend at the rate of 6½ per cent. per annum for the half-year ended June 30th, as compared with a rate of 7 per cent. for the corresponding half of 1900. The decrease in the dividend is due to a slight increase in the working expenses and a decrease in the mineral traffic.

NORTH LONDON.—The report for the half-year ending June 30th states that the gross receipts amount to £273,551, against £278,908 in the corresponding period of 1900, a decrease of £5,357, and the expenses to £166,480, against £162,528, an increase of £3,952, the percentage of working expenses to gross receipts being 60·86, against 58·27. The net result of the half-year's working, after payment of interest on the debenture capital, is a balance to the credit of revenue of £86,078, from which the declaration of a dividend for the half-year is recommended on the consolidated stock at the rate of 6 per cent. per annum, leaving a balance of £3,701 to be carried forward to the current half-year, against £2,625 in 1900.

RHONDDA AND SWANSEA BAY.—The accounts for the half-year to June 30th show gross receipts on revenue account of £45,552, as compared with £38,047 for the corresponding half-year of 1900. The total working expenditure amounted to £27,476, as compared with £23,223, and the profit 18,075, as compared with £14,824. After providing for the interest on the debenture stock and other fixed charges, there remains £10,190. The directors recommend a dividend upon the preference capital for the half-year at the rate of 4 per cent. per annum, leaving £84 to be carried forward. The dividend for the corresponding period of last year was at the rate of 2½ per cent., with £181 carried forward.

UNION PACIFIC.—The gross receipts in the month of June amounted to $5,759,141, working expenses came to $2,088,825, leaving a surplus of $1,670,256, as compared with a surplus of $1,488,925 in the corresponding month of 1900. For the twelve months to the end of June the surplus was $18,904,096, or an increase of $1,138,127 over 1899-1900. The directors have decided to pay the usual half-yearly dividend of 2 per cent. on the common stock.

BANKING COMPANIES.

BANK OF BRITISH NORTH AMERICA.—The directors have resolved to declare an interim dividend, free of tax, of 30s per share, being at the rate of 6 per cent. per annum, carrying forward about £10,600.

MISCELLANEOUS COMPANIES.

ARTHUR GUINNESS, SON, AND CO.—The directors have declared a final dividend on the ordinary stock of 9 per cent., making 10 per cent. for the year, with a bonus of 4 per cent.; £100,000 has been added to the account of the reserve for capital expenditure and contingencies, and £30,000 to the depreciation fund, and £48,562 is carried forward.

BELFAST STREET TRAMWAYS.—The report for the half-year ended June 30th shows a balance at the credit of revenue account of £10,607 (after transferring to the credit of the revenue account for the half-year £2,500 from the reserve accounts), and the directors recommend a dividend at the rate of 6½ per cent. per annum, with a bonus of 1s per share, together 7s 6d per share, free of tax, which will absorb £9,975 and leave £632 to be carried forward.

BRITISH OIL AND CAKE MILLS.—The report for the year ended June 30th states that the amount carried forward by the last report—viz., £14,152, was reduced by £2,321 paid for income-tax and £4,180 required to bring the ordinary share dividend for the year ended June 30, 1900, up to a full 7 per cent. The net profits of the businesses amount to £73,011, to which has to be added £1,475 interest on investments, £208 received for transfer and other fees, and £7,650 brought forward from last account, and after payment of directors' fees, head office establishment charges, debenture stock, and other interest there remains a balance of £42,234. The directors recommend that £33,000 be appropriated in payment of the preference share dividend, and that the balance—viz., £9,234 be carried forward.

CRYSTAL PALACE DISTRICT GAS.—In their report the directors recommend a dividend at the rate of 5 per cent. per annum for the half-year ended June 30th last, carrying £2,697 forward.

GLASGOW TRAMWAY AND OMNIBUS.—The gross income for the half-year shows, when compared with the corresponding period of 1900, an increase of £3,195, but this increase arises chiefly from the acquisition of the businesses of Wm. Forbes, Limited, and William Forbes, Hillhead. There is a balance at the debit of revenue account, after deducting amount brought forward from preceding account, of £542.

GUEST, KEEN, AND CO.—The directors report that the total profits for the twelve months ended June 30, 1901, after payment of all formation expenses, and making provision for bad and doubtful debts, amount to £387,065. After deducting from this amount the debenture interest, £31,550, and interim dividends, the directors recommend a dividend on the ordinary shares at the rate of 12½ per cent. per annum, free of tax, for the six months ending June 30, 1901 (making 10 per cent. for the year), to carry to reserve £150,000, and to carry forward £110,844.

LEOPOLD SCHWABACHER.—The directors recommend a dividend of 12½ per cent. per annum on the ordinary shares for the year ended June 19th. £1,500 is placed to reserve, and £1,975 carried forward.

LONDON GENERAL OMNIBUS.—The gross receipts for the past half-year decreased by £5,766, while expenses were £15,857 larger, resulting in a total loss of £21,623. A sum of £5,000 has been transferred to profit and loss account from the general reserve fund, and the directors propose to declare a dividend at the rate of 6 per cent. per annum, leaving £3,376 to be carried forward. A year ago the dividend and a bonus paid together equalled a rate of 10½ per cent., while £12,994 was carried forward.

MANCHESTER SHIP CANAL.—The report for the half-year ending June 30th states that the expenditure out of capital amounted to £42,568, but as the proceeds of sales of land and plant and other receipts were £259, the net outlay was £42,309. The ship canal revenue receipts amounted to £146,508, and the expenditure to £104,475, leaving a credit balance of £42,033. The profits of the Bridgewater department were £13,208. The balance

carried to net revenue account was therefore £55,241, to which was added £6,022 for bankers' and general interest, making a total profit on the half-year's working of £61,263. After setting aside £2,000 for a reserve fund to meet certain contingencies, the directors were thus able to pay out of the profits of the half-year the interest due upon the first and second mortgage debentures amounting to £44,743, the interest due on the mortgage of surplus lands amounting to £1,000, and there was a balance remaining of £13,520 for the Corporation of Manchester on account of the interest due on the debentures they hold.

METROPOLITAN RAILWAY CARRIAGE AND WAGON.—The accounts for the year show a profit of £22,821. A dividend at the rate of 7s 6d per share per annum is recommended for the last half-year, making 10s for the year, and in addition a bonus of 5s per share, leaving a carry forward of £6,940.

MIDLAND RAILWAY CARRIAGE AND WAGON.—The accounts for the year ended on June 30th last show a gross profit of £44,524. Adding to this sum the amount brought forward from last year, namely, £2,361, the sum to be dealt with is £46,885. From this must be deducted £5,500 regularly set apart for depreciation of wagons let on ordinary hire and £2,000 for depreciation of plant and machinery. The interim dividend absorbed £5,300, so the available balance thus becomes £34,085. The directors propose to pay a dividend on the ordinary shares at the rate of 7½ per cent. (free of tax), less the interim dividend paid February 16th last, and a bonus of 10s per share on the ordinary shares, to increase the reserve fund by £10,000, making that fund £58,248, and to carry forward £3,785.

MILLWALL DOCK.—The revenue account for the half-year shows the gross receipts to have been £140,729, as compared with £119,921 for the corresponding period of last year, and, after providing for interest on debenture stocks, there remains the sum of £9,967 to be carried to the general balance-sheet, as against £4,402 in June, 1900. The directors recommend the distribution of a sum of £6,687, being that part of the amount of £15,430 pertaining to the year ending December 31, 1899, and standing to the credit of the holders of the first £5 per cent. preference stock, Act 1866, payable on the 20th inst.

MITCHELLS AND BUTLERS.—The report for the year ending June 30, 1901, states that the profit is £191,104, to which add the sum of £49,110 brought forward from last year, totalling £240,214. The directors recommend a dividend of 16s per share (making a total of 20s per share for the year), to contribute to the employees' superannuation fund £500, and to carry forward £73,030. They also propose to set aside £15,000 in cash to a mortgage and debenture redemption fund. During the year 17,260 new ordinary shares have been allotted, in respect of which premiums have been received up to June 30th last amounting to £105,080, which added to reserve brings this amount to £305,080.

SCHIBAIEFF PRTROLEUM.—The report for the financial year ended April 13, 1901, states that the profits of the Russian company (Messrs S. M. Schibaieff and Co.), after deductions for reserve and sinking funds amounting in all to Rs.221,846·63, and for taxes payable to the Russian Government amounting to Rs.53,335·38, or £5,644, are Rs.672,191·89, or £71,131, which they have declared as dividend. The total net revenue of the English company is £81,166, including £4,861 brought forward. The directors recommend the payment of 4 per cent. on 574,630 ordinary shares, being a final distribution to make up 9 per cent. per annum on these shares, carrying forward £2,147. The Russian company's reserves now amount to £513,773.

SMITH, GARRETT, AND CO.—The directors recommend for the year ended June 30th a dividend at the rate of 10 per cent. per annum on the paid-up ordinary share capital and a bonus of 2 per cent. They carry £10,000 to reserve fund, making it £105,000, and £3,000 to building account, leaving a balance to be carried forward of £14,012.

SOUTH METROPOLITAN GAS—The report for the past half-year states that the price of gas coal, which advanced from 6s 6d per ton free on board in the Tyne in 1898 to 8s in 1899 and to 16s in 1900, came down to 9s in the spring of the present year, when the company made their annual contracts. Concurrently, however, with falling prices for coal, the value of coke has fallen at least in equal proportion, consequently the apparent saving of 7s per ton on this year's contracts is reduced to less than half that amount. The directors have reduced the price of gas from 2s 8d to 2s 3d per thousand feet from Midsummer, and this has been attended with a considerable increase in the consumption. The profit for the half-year, after paying all fixed charges, enables the directors to recommend the payment of the full dividend at the rate of 5 per cent. per annum, to increase the insurance fund by £14,671, and to carry forward £21,568.

SOUTH STAFFORDSHIRE WATER WORKS.—The report states that after providing for interest on debenture stock and preference stock, the amount remaining for division, including £5,746, the balance brought forward is £22,657. The directors recommend a dividend for the half-year on the ordinary stock at the rate of £5 10s per cent. per annum, tax free, carrying forward £6,294.

MINING COMPANIES.

CROWN REEF.—The report for the year ended March 31st states that the mine was formally handed back to the company on March 26, 1901. The accounts now presented show a gross expenditure of £40,696. The divisible profit brought forward from last year amounted to £129,908, to which can be added the amount received for interest and rents, less the amount expended during the year, leaving the sum of £91,319 to the credit of profit and loss account at March 31, 1901. The directors consider it in the best interests of shareholders not to declare any further dividends until such time as the mine resumes active operations.

The Commercial Times.

THE CORN TRADE.

Mark Lane, Friday Evening.

Under propitious circumstances, harvest operations have progressed with rapidity, and, although most cereals are spoken of as short in straw, the condition and yield of wheat are both regarded as very satisfactory, while some few samples were submitted on this market, but, so far, the quantity is inadequate to form a market. The general tone throughout the week has been of a decidedly quiet character, the market naturally suffering from holiday influence, and the small attendance of buyers assembled denoted little or no disposition to engage in business beyond wants of immediate necessity. Holders, however, by no means pressed trade, which resulted in values ruling steady. Old crop English wheat on this market, and also several provincial exchanges, is in such small supply as to be practically non-existent, and values must be regarded as purely nominal. Fair supplies of foreign sorts were held for full recent values, and in the case of American, sellers were inclined to hold for a slight increase, which, however, proved unobtainable. Consumers still exercise reserve in regard to flour, where heavy stocks still tend against any improvement, but holders are mostly disinclined to accept a concession, while business, as a consequence, pursues a very slow course. Country brands are without change. The floating and forward shipment section for wheat has only varied to a slight extent, there being no undue desire to force sales on the part of sellers, notwithstanding a lack of demand. The Mozambique, 13,000 qrs, Blue stem, end of June bill of lading, sold, at 29s; 8,000 qrs Victorian, July-August, at 29s 4½d. 13,000 qrs Walla-Walla, September-October, at 29s 6d; and the Germania, 4,000 tons River Plate, July loading, at 27s 6d. For Californian, September, 30s was refused. Business in parcels was confined to a limited compass, although where sales resulted, steady prices were obtained. Hard winter, afloat, sold, 26s 9d; shipping or shipped, 26s 9d; and August, 27s. Malting barley is quite nominal in absence of business, while grinding sorts, being more freely offered, receded 3d to occasionally 6d per qr. The cargo department commenced with a very firm tone, only small offers being made, and with an improved demand of fair trade was carried through at rather better rates. The Zoe, Crimean-Azoff, due out, sold at 18s; 13,000 qrs Azoff, eight options, September-October, at 18s; 13,000 qrs Danubian-Bessarabian, August-September, old style, 18s; and 13,000 qrs Azoff, October-November, at 18s 3d. Flat maize on spot has been in fair support, and with little offering rates have moved against buyers, round corn in the meantime ruling steady. A firm tone predominated in the cargo market, but only a moderate

business was concluded. 11,000 qrs Danubian, prompt, sold, 22s. 13,000 qrs ditto, October-November, half old crop, at 22s. The Winnie, 2,500 tons yellow La Plata, afloat, at 21s 7½d; the Enterprise, 2,700 tons ditto, on passage, at 21s 6d; and a cargo, 13,000 qrs, per steamer, August 15th to September, 6,000 quarters being Galatz-Foxanian maize, and 7,000 quarters Danubian-Kustendji barley, at 22s and 17s 9d respectively. Oats, both on spot and for arrival, are unchanged. The market was rather thinly attended, and a quiet tone prevailed, but late values were mostly upheld, as sellers were not pressing. Samples of new English are coming forward, being in excellent condition, but nothing definite transpired to-day. Foreign sorts were held for late rates, but trade proved quiet. Flour remains very slow, but holders asked previous prices. Grinding barley quiet at late decline. Oats evidenced steady support on former terms, while maize was dearer for flat and firm for round corn. The wheat cargo market ruled quiet, especially for near positions, but for distant sellers are steady. Inverlyon, 11,000 qrs Australian, arrived, sold at about 28s 10½d; 28s 3d paid for Ferdinand Fisher, Walla-Walla, off coast; 30s 3d asked for Californian, September-October. Parcels: Red Winter, August, sold late yesterday at 27s. Argentine shipments, 42,000 qrs. Maize again dearer. 21s 9d was paid for, Northfield steamer, yellow La Plata, August 2nd bill of lading, and 22s accepted for a steamer, 2,700 tons, August-September. 29s was asked for 14,000 qrs Galatz-Foxanian, steamer, November-December. Argentine shipments, 233,000 qrs barley, dearer. 18s 4½d paid for Girdleness, steamer, Azoff, about to load. Oats sparingly offered, with a dearer tendency.

The London Produce Clearing House, Limited, supply the following:—

THE IRON AND COAL TRADES.

The reports from the iron and steel trades centres continue to be of an unexpectedly cheerful character. Possibly the strike in the United States is having a stimulating effect. At Glasgow a air inquiry has existed for warrants, but the market closes rather flat, and the closing price is slightly lower than last week. Buyers, 53s 6d cash, 53s 4½d one month; sellers, 53s 6½d one month. Stocks in Connals' Stores, Glasgow, 59,110 tons; Middlesboro', 111,421 tons; Hematite, 3,262 tons.

Our Middlesbro' correspondent, writing on Thursday, says:—The pig-iron market was firm during the earlier part of the week, and is now rather easier. No. 3 G.M.B. Middlesbro' pig-iron is to-day 45s 9d to 46s. East Coast mixed numbers hematite pig-iron are now 57s 6d per ton, sellers, for autumn and winter delivery. Shipments of pig-iron are well maintained. The demand for manufactured iron and steel is good, and prices are firm and unchanged at last week's quotations. Steel ship plates, £6 5s; steel ship angles, £5 17s 6d; iron ship plates, £6 17s 6d; iron ship angles, £5 17s 6d; iron bars, £5 5s. Iron ore.—Best is scarce, and mineowners are very firm in their quotations. Best Bilbao rubio iron ore (50 per cent. iron), 15s 9d; Gellivare Swedish iron ore (60 per cent. iron), A grade "hematite," 18s 9d; C grade "Cleveland," 14s 6d, c.i.f., North-East Coast ports.

The *Iron and Coal Trades Review* writes as follows respecting manufactured iron and steel:—A more active business is passing in finished material, and many makers have sufficient orders on their books to keep them employed for the next two or three months. The various advances which have been made of late, especially in shipbuilding material, far from checking the demand, seem to have strengthened it, consumers being anxious to place their orders before further rises take place. The manufacturers in the North of England are leading in the matter of advances, and are in a strong position as regards the amount of work on their books, despite the fact that in other districts prices are lower than theirs. There is a general upward tendency, however, in nearly all the chief centres, and finished material is becoming dearer everywhere. Some small upward movements are recorded this week. Plain iron castings have gone up 2s 6d in Middlesbro', while in South Wales steel sheets are 2s 6d and rails 5s dearer.

There is not much change in the condition of the coal trade. In the North of England best steam coal has been advanced and 13s 6d f.o.b. is readily got, while 14s is obtained in a good many cases. Steam smalls have been put up to 5s 6d per ton. Gas coals are also considerably firmer, and some sales at 11s per ton f.o.b. have been effected. Collieries in the Manchester district have been working only very irregularly during the past week, and the output has scarcely represented more than about half the average get. In house-fire coals business moves on slowly, with stocks accumulating, but the principal coalowners remain firm at list rates on the basis of about 16s to 16s 6d best house coal, 15s to 15s 6d seconds; and 14s to 14s 6d common house coal at the pit. The following are the current quotations in South Wales:—Best steam coal, 18s 6d to 19s 6d; best seconds, 17s 6d to 18s; ordinary seconds, from 17s; drys, 15s 6d to 15s 9d; special smalls, 10s 6d to 11s; best ordinaries, 9s 6d to 10s; seconds, 8s 6d to 8s 9d; and inferior sorts including drys, from 7s 6d.

The cotton market continues quiet, and prices generally have had an easier tendency. In Sea Island no business is reported. Forwarded this week—American Sea Island. In American a moderate business has been done at prices rather in buyers' favour. The quotations are reduced 1-32d per lb. In Brazilian the business continues moderate, and quotations are reduced ⅛d per lb. In Egyptian a moderate business has been done at irregular rates, and quotations are generally unchanged. For Peruvian the market has been very idle, but values are nominally unchanged. East Indian continues in retail demand, and quotations are reduced ½d per lb.

"Futures."—The market for American continues quiet, but the tone has been easier, and the closing quotations show a decline of 4-64d to 7-64d per lb from last Thursday's Circular rates. The following are the closing values of Egyptian—Delivery: F.G.F., August, 5 6-64d to 5 7-64d; September, 5 5-64d; October, 5 6-64d; November, 5 6-64d to 5 7-64d per lb.

The amount of cotton forwarded this week is 44,287 bales, and actually exported 7,292 bales. The decrease of stock this week is 37,070 bales. The sales (four days) amount to 39,170 bales, of which 610 are on speculation, and 1,640 declared for export.

Imports, Exports, Consumption, &c.

	1901. Bales.		1900. Bales.
Imports from Jan. 1 to August 8	1,942,906	.....	1,855,355
Exports from Jan. 1 to August 8	173,637	.....	207,886
Stock, August 8	512,180	.....	314,960
Consumption from Jan. 1 to August 8..	1,880,965	.....	2,051,121

These figures show:—

	Bales.
An increase of imports compared with the same date last year of	85,550
A decrease of actual exports of	34,130
A decrease of quantity taken for consumption of.....	170,160
An increase in stock of	197,220

In speculation there is a decrease of 8,050 bales.

The imports this week have amounted to 14,508 bales, and the quantity of American cotton reported at sea for Great Britain (including cable advices to date) is 38,000 bales, against 50,000 bales at the corresponding period last year.

MANCHESTER, August 8.

Cloth sellers have reported this week rather more doing in certain directions, though trade has been somewhat unevenly distributed. Best quality shirtings and fine fabrics generally may be said to be under moderate engagements, though common cloths keep slow in demand. Burnley lumps keep slow and difficult to move. Glossop fabrics, however, are steady, with moderate engagements. Heavy cloths are quietly steady, but buyers are not much disposed to anticipate requirements at the moment. Home American yarns continue in small demand. Spinners report the aggregate transactions as again dull. Users continue to operate only from hand to mouth. Bundles for export and Bolton spinnings are without material alteration. American cotton has not shown much change during the week, but the feature is that there has been an improved demand to-day. The sales of all kinds of cotton totalling up to 12,000 bales.

THE WOOL TRADE.

The better feeling in the market for home-grown fleeces still continues, but users at present decline to pay any advance, and dealers consequently find it impossible to realise their purchases at a profit.

Our Bradford correspondent, writing on Thursday, says:—There is some hesitation on the part of users in following the recent advance, small though it has been. On the Continent, it is said, a generally incredulous attitude prevails. It is pointed out that next month will bring another heavy quantity under the hammer in London, and that the trade is not in position to lift it. The situation, however, is slowly improving. The dead weight of wool on the world's market is not nearly so great as it was two years ago when prices were advancing by leaps and bounds. Wool is now little more than half the price it was then, and there is no other article of large consumption which shows such an immense shrinkage in values. The phenomenally low price is already bringing about a better demand for goods, and manufacturers are finding rather more work. If the confidence in this market becomes general, then the export yarn trade will follow as it has done before. At present the holidays stop business, and it will be some weeks before it is likely to be again in full swing. Meanwhile there will be a fight to maintain the ground that has been gained, however slight that may be.

Messrs Chas. Balme and Co. write on 8th inst. as follows:—

Although business has been considerably interfered with by the holidays since the close of the auctions, there has been a fair amount of enquiry for merino wools in London, and a few parcels have changed hands at fully last sales' prices.

Advices from the Continental and Yorkshire markets have recently been of a satisfactory character, and report not only a steady demand for merinos, but an appreciation in the values of crossbred "tops" of coarse quality. No improvement, however, is noticeable in the position of medium to fine crossbreds.

THE SILK TRADE.

Very little doing, prices advancing on all producing markets.

THE LEATHER TRADE.

Business in leather during the week has been practically at a standstill, owing to the holidays. Quotations are steady, and stocks moderate. Supplies of Australian sides are short, and the import of basils this year has only been about half of the average.

FOREIGN AND COLONIAL PRODUCE MARKET.

For Reports of To-day's Business and Public Sales see "Postscript."

Mincing Lane.

The Produce Markets have suffered again from the interruption from the holidays, and business was only partially resumed during the week.

SUGAR.—A quiet feeling characterised the market all round, and the demand from the trade was chiefly confined to immediate requirements, and in the result only small transactions have been stirring in refined goods, but values have undergone little or no alteration. Raw descriptions are slow. The world's visible supply at the moment stands at 1,500,000 tons, as compared with 1,160,000 tons at corresponding period last year.

HOME REFINED.—Fair sales were effected in cubes at late rates. No. 1, 19s; No. 2, 18s. Pieces and crystals remain slow and unchanged.

FOREIGN REFINED.—Cubes fail to elicit much attention, and quotations in most cases are nominal. Say's, August-September, sellers, 12s 9d; R.A.V., 12s 10½d; A.S.R., 12s 10½d, f.o.b. No. 3, French crystals, on spot, 14s 6¼d. German granulated is rather easier, more particularly forward positions, while business has been conducted slowly. Ordinary first marks, ready delivery, sold, 11s to 10s 11½d; August, 11s to 10s 10½d; October-December, 10s 2½d to 10s 0¾d; November-December, sellers, 10s 0¾d, f.o.b.

BEET remained in a slow state, and prices have receded for both old and new crop. August, sold, 9s 2½d to 8s 10d; Sept., 8s 10¾d; October-December, 8s 6½d to 8s 6d; November-December, 8s 6½d to 8s 6d; January-March, 8s 8½d; and May, 8s 9½d, f.o.b., Hamburg.

Imports and deliveries of sugar into London from January 1st to 3rd inst., with stock at latter date:—

	1901. Tons.	1900. Tons.	1899. Tons.	1898. Tons.
Imported	148,650	111,250	118,960	99,870
Delivered	125,870	100,130	109,400	107,820

Stock, United Kingdom	148,460	52,470	53,630	86,700
Cane Jaggery, per cwt..	8/9	9/7½	10/0	9/0
Beet, 88 %, f.o.b.	..	12/0	10/9	9/6
Java, afloat.....	11/0	13/3	12/6	12/0

RUM.—Only a small business has been doing, and prices remain weak.

GLUCOSE steadily held, but in quiet request. On spot, liquid H, sellers, 11s 3d; climax chips, 13s 1½d; and white, 12s 9d per cwt.

COFFEE.—Spot market has ruled quiet and unchanged. For future delivery, business has been of a quiet character, but prices ruled firm. Santos, September, sold, 27s 4½d to 27s 9d; December, 27s 10½d to 28s; March, 28s 9d to 28s 10½d; and May, 29s 1½d to 29s 6d per cwt.

Imports, &c., into London from commencement of year to 3rd inst., with stock remaining:—

	1901. Tons.	1900. Tons.	1899. Tons.	1898. Tons.
Imported	36,230	27,640	36,630	34,600

Contracts for 28,750 bags Santos coffee registered during the week.

COCOA remains quiet and unchanged, the market being virtually closed for the holidays during the week.

TEA.—Only small sales have been passing during the week by private treaty, the market remaining virtually closed for the holidays.

RICE continues steady at fully the recent level, but only a small trade has been concluded.

BLACK PEPPER.—A very slow demand predominated, and quotations in most cases are nominal. Singapore, September-November, quoted 6d per lb. No public sales were held.

WHITE PEPPER keeps extremely slow. Penang, most positions quoted 8⅝d per lb.

CLOVES slow, and quotations nominal in absence of business.

JUTE.—A steady demand has been experienced for old crop on spot, and moderate sales were passed at full rates. Top numbers, native first marks, sold £14 10s; assortment, £14; and bottom numbers, £13 10s. New crop was offered with reserve, and rates advanced, but subsequently became weaker. Native first marks, August, canal, done £13 17s 6d; August-September being offered at £13 7s 6d, c.f. and i.

HEMP.—A steady tone continues for Manila, and a moderate business was effected. Fair current, June-July sellers, £31 15s; superior seconds due, sold, £29; good seconds, October-November, £26; fair ditto, £25; good brown, £24; and fair ditto, £23; good seconds, October-December, £26; fair, £25; and good brown, £24; fair seconds, July-August, £25 10s to £25 15s. New Zealand steady. 25 tons near, sold, £25 15s; July-August, £25, c.f. and i.

SHELLAC.—A moderate trade has been stirring in spot parcels at full values. Futures firm. T.N., October, sold, 68s; November, 68s 6d; and January, 68s 6d per cwt.

Continued on page 1236.

Continued from page 1232.

GAMBIER steady, but quiet, with sales on c.f. and i. terms. Continent at 20s 6d per cwt. for August-September shipment.

QUININE remains quiet but steady, with sales in December, B and S, &c., at 1s 2½d to 1s 2¾d per ounce.

METALS.—The strike of steel workers in America has imparted depression respecting the market for tin, while copper has also suffered in sympathy. The former metal commenced easier last Tuesday, and Straits, for cash, fell to £116, with three months, prompt, moving down to £112. Forward was pressed during the middle of the week, while irregularity and increased weakness followed, cash warrants after official hours on Thursday ruling at £114 5s, and three months, prompt, at £111 12s 6d. Realisations attended last Tuesday's market respecting copper, which began lower, but stronger American support was accorded. Spot standard, sold from £66 2s 6d to £66 5s 9d, and three months, prompt, at £66 10s to £66 17s 6d. Less American buying ensued during the next two days, and spot standard, left off after official hours on Thursday at £65 15s, with three months, prompt, at £66 2s 6d to £66 5s per ton. Lead is rather easier, and spelter steadier. Ordinary brands, £16 10s to £16 12s 6d per ton. Quicksilver unaltered.

OILS.—Linseed firmer: on spot, in pipes, £32 and barrels, £32 2s 6d; August, £32; September-December, £31. Hull, spot, naked, £31; month, £30 10s; September-December, £29 17s 6d. Rape nominal. Brown, in barrels, on spot, £26 10s; month, £26 10s; September-December, £26 15s. Ravison nominal. Cotton firmer: refined, on spot, £24 to £24 10s, according to make and crude. Cocoanut firm: Ceylon, on spot, £26 15s; and shipments quoted at £25, with Cochin in these positions at £24 and £30 15s per ton respectively.

TURPENTINE is dearer: on spot, 27s 3d; September-December, 27s 6d; January-April delivery, 28s 6d. Stocks at public wharves on 3rd inst., 16,350 barrels, against 19,750 barrels same time last year. In course of landing 1,000, against nil. Deliveries week ending 3rd inst., 1,343, against 1,992; and afloat to London 16,970 barrels, against 8,000 barrels during the corresponding period of 1900.

PETROLEUM dearer. American, on spot, 5¾d; water white, 6¾d; Russian, 5d to 5¼d per gallon.

ROSIN unaltered. Common strained, on spot, 4s 7½d per cwt.

LINSEED firmer on the week. Calcutta, on spot, 55s 9d, and passage, 55s 9d; July, 55s 9d; July-August, 55s 9d; August-September, 56s 3d. To the Continent: Bombay, August-September, 58s 9d; September-October, 58s 9d. Calcutta: June-July, 56s 3d; July-August, 56s 3d; and Azoff, Black Sea, nominal, c.i.f. Imports into London since January 1st, 366,700 qrs., against 420,200 qrs same time last year.

COTTONSEED firm and in fair demand. London, spot, £7 12s 6d; August, £7 12s 6d; September, Fayoumi, £7 13s 9d; October, £6 18s 9d; November-January, £6 11s 3d; Hull, spot, and up to August, £7 10s; November-January, £6 8s 9d. Cargoes, November, £6 12s 6d. Imports into London from January 1st, 28,722 qrs, against 30,750 qrs at same time last year.

RAPESEED steady but quiet. Yellow Cawnpore, August-September, 42s 9d; brown Cawnpore, 39s 6d. To the Continent: yellow Guzerat, August-September, 45s 3d; yellow Cawnpore, 42s 9d; brown Cawnpore, 39s 9d; Ferozepore, July-August, 40s; Jamba, October, 29s. Imports into London since the beginning of the year, 27,950 qrs, against 33,700 qrs same time 1900. Afloat from the East Indies, as per last advices, 21,000 qrs, against 4,000 qrs.

TOBACCO.—Owing to the holiday season there are no transactions of any interest to report.

POSTSCRIPT. Friday Evening.

SUGAR.—The home-refined market ruled steady, but at late rates only moderate sales were passed. At public sale, 580 tons grocery crystallised met a good demand at full recent rates to occasionally rather better. 4,698 bags Trinidad, nearly all sold: Good medium, 16s to 16s 3d; 1,083 bags Demerara, fine bright colory, 16s 9d to 17s; good, 16s 3d to 16s 6d. 352 bags Trinidad syrups, 112 bags Muscovado St Vincent, 1,050 bags Argentine syrups, and 50 baskets white crystallised Java retired. German granulated weak: October-December, sold, 10s 0¼d, f.o.b. Beet flat: August, sold, 8s 10¾d to 8s 9¾d; September, 8s 9¼d to 8s 8¾d; and May, 8s 9d, f.o.b.

COFFEE.—Futures irregular, but dearer. September sold 28s 6d to 28s 3d; December, 28s 10½d to 28s 9d; March, 29s 6d; and May, 30s 1½d to 30s per cwt.

SPICE.—25 tons black Singapore pepper, October-December, done, 6 1/16d per lb.

JUTE.—Quiet. 1,000 bales native first marks, August, canal, London, sold, £13 15s; 500 bales ditto, September, £13 7s 6d; 250 bales red R B, No. 2, old crop, spot, London, £14 17s 6d; 250 bales P A, No. 2, ditto, £15 13s 6d; and 250 bales P S, S circle, E ditto, £13 10s, c.f. and i.

HEMP firm, and business checked. Fair current, near done, £32; good seconds, October-December, £26; and fair ditto, £25, and buyers. 25 tons good fair Wellington, September, sold £24 10s, c.f. and i.

SHELLAC dearer and active, 1,000 chests TN being sold: August, 66s to 66s 6d; September, 67s to 67s 6d; and January, 68s 6d to 69s per cwt.

METALS.—Tin firmer. Straits, for cash, closed with buyers, at £115 10s; and three months, prompt, at £112 2s 6d. Estimated sales during the week 2,500 tons. Copper dearer. Spot standard closed, with buyers, at £66; and three months, prompt, at £66 7s 6d. Sales during the week 2,600 tons. Spelter rather steadier. Scotch pig iron at the London market closed, at 53s 10d cash; 53s 6d per ton, one month.

TALLOW.—No public sales were held this week.
